Regulatory Information

Declaration of Conformity
Trade Name: SONY
Model No.: DPP-FP67
Responsible Party: Sony Electronics Inc.
Address: 16530 Via Esprillo, San Diego, CA 92127 U.S.A.
Telephone No.: 858-942-2230
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.
These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
– Reorient or relocate the receiving antenna.
– Increase the separation between the equipment and receiver.
– Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
– Consult the dealer or an experienced radio/TV technician for help.

For Customers in Europe

This product has been tested and found compliant with the limits set out in the EMC Directive for using connection cables shorter than 3 meters (9.8 feet).

Attention

The electromagnetic fields at the specific frequencies may influence the picture of this digital photo printer.

Notice

If static electricity or electromagnetism causes data transfer to discontinue midway (fail), restart the application or disconnect and connect the communication cable (USB, etc) again.

Notice for the customers in the countries applying EU Directives

Disposal of Old Electrical & Electronic Equipment (Applicable in the European Union and other European countries with separate collection systems)

This symbol on the product or on its packaging indicates that this product shall not be treated as household waste. Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. The recycling of materials will help to conserve natural resources. For more detailed information about recycling of this product, please contact your local Civic Office, your household waste disposal service or the shop where you purchased the product.

NOTICE FOR CUSTOMERS IN THE UNITED KINGDOM

A moulded plug complying with BS 1363 is fitted to this equipment for your safety and convenience. Should the fuse in the plug supplied need to be replaced, a fuse of the same rating as the supplied one and approved by ASTA or BSI to BS 1362, (i.e.marked withflammable mark) must be used. If the plug supplied with this equipment has a detachable fuse cover, be sure to attach the fuse cover after you change the fuse. Never use the plug without the fuse cover. If you should lose the fuse cover, please contact your nearest Sony service station.

Duplication, edition, or printing of a CD, TV program, copyrighted materials such as pictures or publications, or any other materials except for your own recording or creation is limited to private or domestic use only. Unless you hold copyright or have permission from copyright holders for the materials to be duplicated, use of those materials beyond this limit may infringe the provisions of the copyright law and be subject to the copyright holder’s claim for damages. When using photo images with this printer, pay special attention not to infringe the provisions of the copyright law. Any unauthorized use or modification of portraits may also infringe their rights.

For some demonstrations, performances, or exhibits, photography may be forbidden.

Backup recommendations

To avoid potential risk of data loss caused by accidental operation or malfunction of the printer, we recommend that you save a backup copy of your data.

Information

IN NO EVENT SHALL SELLER BE LIABLE FOR ANY DIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE, OR LOSSES OR EXPENSES RESULTING FROM ANY DEFECTIVE PRODUCT OR THE USE OF ANY PRODUCT.

Sony shall assume no responsibility for any accidental or consequential damages or loss of the recorded content which may be caused by use or malfunction of the printer or memory card.

Notes on LCD screen

• The displayed image on the screen is not identical in picture quality and colors with the printed image because display methods or profiles differ. Please regard the displayed image as just a reference.
• Do not press against the LCD screen. The screen may be discolored and that may cause a malfunction.
• Exposing the LCD screen to direct sunlight for long periods may cause malfunctions.
• The LCD screen is manufactured using extremely high-precision technology, so over 99.99% of the pixels are operational for effective use. However, there may be some tiny black points and/or bright points (white, red, blue or green in color) that constantly appear on the LCD screen. These points are normal in the manufacturing process and do not affect the printing in any way.
• Images may trail across the LCD screen in a cold location. This is not a malfunction.

   When using a PictBridge-compliant digital camera, a USB memory, a Bluetooth USB adaptor (DPPA-BT1*), or other external USB device, connect it to this connector.
   * In some regions, the DPPA-BT1 Bluetooth USB adaptor is not sold.
Checking the contents of the package

Make sure that the following accessories are supplied with your printer.

- Paper tray (1)
- AC adaptor (1)
- USB cable (1)
- AC power cord*1 (1)
- Cleaning cartridge (1)/Cleaning sheet (1)
- CD-ROM (Windows Printer Driver Software Ver.1.0 and PMB (Picture Motion Browser) Ver.4.2)
- Operating Instructions (this booklet)
- Read This First (1)
- About the Print Packs (1)
- Warranty (In some regions, the warranty is not supplied.)
- Sony End User Software License Agreement

*1 The plug shape and specifications of the AC power cord differ depending on the region in which you purchased the printer.

About Sony Print Packs (sold separately)

Please use a Sony optional color print pack designed for the printer. For details, refer to the supplied “About the Print Packs.”

Setting the ink ribbon

1 Pull and open the ink ribbon compartment door.

2 Insert the ink ribbon in the direction of the arrow until it clicks into place.

3 Close the ink ribbon compartment door.

Removing the ink ribbon

Push up the eject lever, and remove the used ink ribbon.
Notes

- Do not touch the ink ribbon or store the ink ribbon in a dusty location. Fingerprints or dust on the ink ribbon may result in imperfect printing.
- Do not rewind the ink ribbon and use the rewound ink ribbon for printing. Otherwise, proper printing results will not be obtained, or a malfunction may occur. If the ink ribbon does not click into place, remove it and then re-insert it. Only when the ink ribbon is too slack to be loaded, keep pressing the core of the ribbon and wind the ink ribbon in the direction of the arrow to remove the slack.

- Do not disassemble the ink ribbon.
- Do not pull out the ribbon from the ink ribbon.
- Do not remove the ink ribbon while printing.
- Avoid placing the ink ribbon in a location subject to high temperatures, high humidity, excessive dust or direct sunlight. Please store it in a cool and dark place and use it within a short period from the date of production. Depending on the storage conditions, the ink ribbon may deteriorate. Use of such an ink ribbon may affect the printed results, for which we cannot guarantee or compensate.

Inserting the print paper

1. Open the paper tray cover.
   Hold the parts on both sides of the paper tray cover (shown with arrows) and open the paper tray cover.

2. Set the print paper into the paper tray.
3 Close the paper tray cover.

4 Open the slide cover.

5 Insert the paper tray into the printer.

Notes

- You can set up to 20 sheets of print paper. Riffle the print paper thoroughly. Insert the print paper with the protective sheet facing up. Remove the protective sheet from the tray.
- If there is no protective sheet, insert the print paper into the paper tray with its printing surface (the side with no imprint) facing up.
- Do not touch the printing surface. Fingerprints or contamination on the printing surface may result in imperfect printing.
- Do not bend the print paper, or cut the print paper from the perforations before printing.

- To avoid paper jam or malfunctions of the printer, make sure of the following before printing:
  - Do not write or type on the print paper.
  - Do not attach a sticker or stamps on the print paper.
  - When adding print paper to the paper tray, be sure that the total number of print paper sheets does not exceed 20 sheets.
  - Do not insert different types of print paper together into the paper tray.
  - Do not print on used print paper. Printing an image twice on the same paper will not make the printed image thicker.
  - Use the print paper for this printer only.
  - Do not use print paper ejected without printing.

Notes on storing the print paper

- To store print paper in the tray, remove the paper tray from the printer and close the slide door of the paper tray.
- Avoid storing the paper with the printed faces touching each other or in contact with rubber or plastic products, including vinyl chloride or plasticizer for an extended period of time; color changes or deterioration of the printed image may occur.
- Avoid placing the print paper in a location subject to high temperatures, high humidity, excessive dust or direct sunlight.
- When you are going to store partially-used print paper, store it in its original bag or a similar container.
Connecting to the AC power source

1. Insert the plug of the AC adaptor into the DC IN 24 V jack on the back of the printer.

2. Connect one plug of the AC power cord to the connector of the AC adaptor and the other plug to the wall outlet.

Notes

- Do not place the printer in an unstable location such as on a wobbly table.
- Leave enough room around the printer. The print paper emerges from the back a few times during printing. Keep 10 cm (13/32 inch) or more space at the rear of the printer.
- Connect the AC adaptor to an easily accessible wall outlet close by. If trouble occurs while using the adaptor, immediately shut off the power by disconnecting the plug from the wall outlet.
- Do not short the plug of the AC adaptor with a metallic object, as this may cause a malfunction.
- Do not use the AC Adaptor placed in a narrow space, such as between a wall and furniture.
- When you have finished using the AC adaptor, disconnect the AC power cord from the DC IN 24 V jack of the printer and from the AC power sources.
- The printer is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet, even if the printer itself has been turned off.
- A socket outlet should be as close as possible to the unit and easily accessible.

To use your Printer abroad - Power sources

You can use your Printer and the AC Adaptor (supplied) in any country or region where the power supply is within 100 V to 240 V AC, 50/60 Hz.

Do not use an electronics transformer (travel converter), as this may cause a malfunction.
When the photo printer is turned on without a memory card inserted or a PC connected, the initial display below appears on the screen.

When the printer is not operated for 5 seconds, demo mode is displayed. If any other button than the (on/standby) button is pressed, the screen returns to the initial display. If a memory card is inserted, or a PC is connected, the images from the connected device are displayed.

To print directly from a memory card or an external device, see page 14. To print from a PC, see page 37.

Basic printing

Inserting a memory card

Prepare a memory card that contains images for printing: “Memory Stick” media, “Memory Stick Duo” media, SD Memory Card, or an xD-Picture Card.

Insert the desired card with its labelled surface facing up into the proper slot until it clicks firmly into place.

For the types of memory cards you can use with the printer, please see pages 63 to 65.

To eject a memory card

Remove the memory card from the slot slowly in the reverse direction it was inserted.

Notes

- Insert only the memory card that you want to use for printing. When multiple memory cards are inserted, the memory card inserted first will have the first priority.
- The printer supports both standard and small sizes. A “Memory Stick Duo” media adaptor is not necessary.
- To use a memory card, follow the notes described on pages 63 to 65.

Printing selected images

This section explains how to display the images of a memory card or a USB memory on the printer’s LCD screen and print the selected images (direct printing). For how to print from a USB memory, see page 32.

Setting the print quantity

1 Press the (on/standby) button to turn on the printer.
   The STANDBY indicator turns off. An image stored on the memory card or USB memory device inserted in the printer is displayed on the LCD screen.

2 Press < >/ > to display the image that you want to print.

3 Set the print quantity.
   To print one copy of the displayed image, skip this procedure and go on to the next step.
   Press Δ to display the print quantity indication. Then specify the print quantity with Δ/∇.
Press PRINT.
While the PRINT button is lit in green, the printer is ready for printing. The image being displayed is printed.

**To print multiple images**
Repeat steps 2 and 3.

**To change the print quantity**
Display the image whose print quantity you want to change, and change the print quantity with $\Delta/\nabla$.
If you select “0,” printing is canceled.

### Enlarging an image to be printed (Trimming Print)
Press ENTER repeatedly until the image is enlarged to the desired size. You can enlarge an image up to the 5 times the original scale. Press $<\!\!/>/\Delta/\nabla$ to move an image.
Press PRINT to display the image preview for printing. Then press PRINT again to print the previewed image.
Even if you have set a print quantity for other images, only the previewed image is printed.

### Notes
- Never move or turn off the printer while it is printing; the ink ribbon or print paper may become stuck. If you turn off the power accidentally, keep the paper tray inserted and turn on the printer again. If paper being printed remains in the printer, remove the paper that emerges automatically and resume printing.
- Do not remove the paper tray during printing. Otherwise, a malfunction may occur.
- The print paper emerges a few times during printing. Do not touch nor pull the emerged paper during the printing process.
- If print paper is jammed, see page 60.

### On selecting input
The printer is not equipped with an input select switch. When you connect a memory card or a USB memory to the printer, images from the connected media are displayed automatically. If multiple memory cards or a USB memory are connected, the media first connected has the priority.
When you turn on the printer with multiple media inserted or connected, the printer detects the media in the order of “Memory Stick” media, SD Memory Card, xD-Picture Card, and then a USB memory connected to the PictBridge/EXT INTERFACE connector.
Enjoying various printing

- Operation using the printer buttons

Exposure and Red-eye Correction — page 22

Press the AUTO TOUCH-UP button to automatically adjust a photo with problems, such as being backlit, or showing the red-eye phenomenon.

A variety of printing

Press MENU and then select the icon of the desired operation.

- Press <|>/|/>/Δ/∇ to select the desired icon and press ENTER.
  1. Edit
  2. Layout Print
  3. Batch Print
  4. Calendar
  5. ID Photo
  6. Print setup

- To exit the menu, press CANCEL or press MENU again.

Continued
You can adjust the size, position, hue or other picture property of the selected image.

For the icons you can use, see page 16.

You can place multiple photos on split screens to make a print.

You can make a print with 2-split, 4-split, 9-split, 13-split or 16-split images.

You can select from batch print options such as “Index Print,” “Print All,” and “DPOF Print.”

You can use a photo for an identification card such as a passport.
You can change the settings during printing, the printer settings, and on-screen display settings.
Exposure and Red-eye Correction

1 Display an image that you want to adjust and then press the AUTO TOUCH-UP button.
The correction of the selected image starts. The results of the adjustment will be displayed on the screen.

To display the original image (before correction) again
Press the AUTO TOUCH-UP button. To display the adjusted image, press the AUTO TOUCH-UP button again.

To cancel correction
Press CANCEL.

Tips
- If there are no images with print quantity settings, the correction adjusts the image being previewed.
- If there are other images with print quantity setting, and print quantity is not specified for the image being previewed, the image being previewed will not be corrected. The images with print quantity settings will be adjusted.
- If you enlarged an image, only the enlarged image will be adjusted and then printed.

2 Press PRINT.
Printing of the image being adjusted starts. When the print quantity setting is specified, the specified number of copies are printed.

Tips
- Adjustment takes effect only on the image being printed. The original image will not be adjusted.
- You cannot perform editing on an image after the correction.

Notes
- Depending on the image, the exposure phenomenon may not be correctable. In this case, select “Adjust” from the Edit menu to adjust the brightness manually (page 23).
- Depending on the image, the red-eye phenomenon may not be corrected.
- When you cancel the edits by selecting (Reset) in the Edit menu, the correction will also be cancelled.
- During the correction process, an animation to show reading and handling of data from a memory card or a USB memory will be displayed. While the animation is displayed, do not remove the memory card or disconnect USB memory.
- You cannot select only Red-eye Correction or only Exposure Correction.
- Depending on the condition of the image, the correction may take some time.

The automatic red-eye correction of this printer uses the technology of FotoNation Inc. in the U.S.A.

Making Batch Print
(Index Print/Print All/DPOF Print)

- **Index Print**
  You can print a list (index) of all the images stored in a memory card or a USB memory, which allows you to check the contents of the selected media easily. The number of split panes on a sheet is fixed to 8 horizontally by 6 vertically.

- **Print All**
  You can print all the images stored on a memory card or a USB memory at one time.

- **DPOF Print**
  The images which are DPOF (Digital Print Order Format) preset for printing are displayed with the print mark ( ) in an image preview. You can print those images at once. The images are printed with the preset number of copies in the order they were displayed.

**Notes**
- For how to preset images for printing, refer to the manual of your digital camera.
- Some types of digital cameras do not support the DPOF function, or the printer may not support some of the functions of the digital camera.

1. From the main menu (page 19), press <1>/<2>/Δ/∇ to select (Batch Print) and then press ENTER. The Batch Print menu is displayed.

2. Press <1/> to select (Index Print), (Print All), or (DPOF Print) and then press ENTER. The confirmation dialog box is displayed.

   **Note**
   If there are no DPOF preset images when you selected “DPOF Print,” an error message will be displayed.

3. To start printing, press Δ/∇ to select “OK” and press ENTER. When you select “OK” printing starts.

   **Tips**
   - To stop printing, press CANCEL and press ENTER in step 3.
   - When the “Date Print” item of the Print setup menu is set to “ON,” the date the image was shot or saved is not printed in the Index Print mode.

2 Press △/▽ to select “OK” and press ENTER.
The printer settings are reset to their default settings.

Printing from a USB memory

You can connect a USB memory and the printer, and print an image directly from the USB memory.

Notes

- We cannot guarantee connection with all types of USB memory.
- We cannot guarantee connection with a mass storage-compliant digital camera or photo storage.
- If a memory card is inserted in the printer, the printer cannot read the signal from a USB memory connected to the PictBridge/EXT INTERFACE connector of the printer. Remove the memory card, if any.

1 Connect the printer to the AC power source (page 12).
2 Press the (on/standby) button to turn on the printer.
3 Connect a USB memory into the PictBridge/EXT INTERFACE connector of the printer.

Notes

- While the access indicator of a USB memory is flashing, never turn off the power of the printer. The data stored in the USB memory may be damaged. We cannot compensate for any damages that may be caused by data loss or damage.
- You cannot use a USB hub or a USB device equipped with a USB hub.
- Encoded or compressed data by fingerprint authentication or password cannot be used.
Printing from a PictBridge camera

You can connect a PictBridge-compliant digital camera and print an image directly from your digital camera.

When printing in the PictBridge mode, make sure to remove memory card(s) and your computer from the printer in advance.

1 Set your digital camera ready for printing with a PictBridge-compliant printer. The required settings and operations that must be completed before connection differ depending on the digital camera. For details, refer to the operating instructions of your digital camera. (In case of Sony Cyber-shot digital camera, for example, select “PictBridge” mode for “USB Connect.”)

2 Connect the printer to the AC power source (page 12).

3 Press the \(\text{\textcircled{1}}\) (on/standby) button to turn on the printer.

4 Connect the PictBridge-compliant digital camera to the PictBridge/EXT INTERFACE connector of the printer. When you connect a PictBridge-compliant digital camera to the printer, “PictBridge” is displayed on the LCD display of the printer.

5 Operate the digital camera to print an image. The printer supports the following prints:
- Single-image print
- All images print
- Index print
- DPOF print
- Borders/Borderless print
- Date print

Notes
- If you replace an ink ribbon while the printer is connected to a PictBridge-compliant digital camera, an image may not be printed properly. If this occurs, disconnect and then re-connect the digital camera.
- When printing via the PictBridge/EXT INTERFACE connector, an image will be printed according to the settings of the Print setup menu of the printer. When you set the Date Print or Borders/Borderless options with your digital camera, the digital camera settings will have priority. If you select “Borderless” with the printer and “Borders” with your camera, “Borders (Pattern 1)” will be used for printing.
- You cannot use a USB hub or a digital camera containing a USB hub.
- For error messages displayed on your digital camera, refer to the operating instructions of your digital camera.
Printing from a Bluetooth-compliant device

By connecting the Sony DPPA-BT1 Bluetooth USB adaptor (sold separately) to the PictBridge/EXT INTERFACE connector of your printer, you can print an image from a Bluetooth-compliant mobile phone, digital camera, or other device.

Notes
- Do not use the DPPA-BT1 outside the area you purchased it. Depending on the area, the use of the adaptor may violate the local radio wave regulations and may be subject to penalty.
- In some regions, the Sony DPPA-BT1 Bluetooth USB adaptor is not sold.

Compatible profiles for Bluetooth communication

The DPP-FP67/FP77 supports the following profiles:
- BIP (Basic Imaging Profile)
  - Image Push Responder
- OPP (Object Push Profile)
  - Object Push Server

For the profiles that your Bluetooth device supports, please refer to its manual.

What is a “Profile”?
A profile consists of the standards that enable Bluetooth wireless communication. There are several profiles available, depending on the purposes and product to be used. To make Bluetooth communication possible, the devices used in the communicated should support the same profile.

Compatible image file formats that can be printed
See page 65.

Maximum number of pixels that can be handled
See page 65.

Printing procedures

When printing from the PictBridge/EXT INTERFACE connector, make sure to remove memory card(s) from the printer in advance.

1. Connect the printer to the AC power source (page 12).
2. Press the (on/standby) button to turn on the printer.
3. Insert the Bluetooth adaptor into the PictBridge/EXT INTERFACE connector of your printer.

Note
If any device, other than the Bluetooth adaptor, such as a memory card, camera, PC, or other USB memory or a USB cable is connected to any of the memory card slots, the PictBridge/EXT INTERFACE connector, or USB connector of your printer, disconnect it from the printer and then connect the Bluetooth adaptor.

4. Print from the Bluetooth-compliant mobile phone, or other device. For printing procedures, refer to the manual of your Bluetooth device.
To select the printer from a Bluetooth-compliant device, select “Sony DPP-FP67 ##”/“Sony DPP-FP77 ##.” “##” stands for the two figures from the right of the address displayed in the LCD screen.

**When input of Passkey* is required**

Input “0000.” You cannot change the Passkey with the printer.

* A Passkey is often referred to as a “pass code” or “PIN code.”

### Notes

- Do not use the DPPA-BT1 outside the area you purchased it. Depending on the areas, the use of this product may violate the local radio wave regulations and may be subject to its penalty.
- The communication distance of the product may vary depending on the obstacles between the product (a human body, metal object, or wall) and the mobile phone or other device.
- The sensitivity of the Bluetooth communication may be affected in the following conditions:
  - When there is an obstacle between the product and the mobile phone or other product such as a human body, metal object, or a wall.
  - Where a wireless LAN is established or a microwave oven is being used near-by, or other electromagnetic waves are emitted.
- Since a Bluetooth device and a wireless LAN (IEEE802.11b/g) device use the same frequency ranges, wave interference may occur when the product is used near a device equipped with a wireless LAN. This may cause deterioration in the communication speed and connection conditions. If this occurs, take the following measures:
  - Keep a distance of at least 10 m from a wireless LAN device when you connect the product to a mobile phone.
  - Turn off the wireless LAN device in case you want to use the product closer than 10 m from the wireless LAN device.
- We can not guarantee that this product works with all devices enabled with Bluetooth wireless technology.
- Sony cannot assume any responsibility for any information leakage that may be caused in Bluetooth communications.
- Sony cannot accept responsibilities for any failure to satisfy the protection requirements resulting from a non-recommended modification or use of the product.
- For customer support information, please refer to the operating instructions of your printer.

---

### Caution

- Radio waves from a Bluetooth device may adversely affect the operation of electrical and medical devices, and could lead to accidents due to malfunctions. Make sure to turn off the product and mobile phone and do not use this product in the following places:
  - Inside medical facilities, trains, airplanes, gas stations or other places that may emit flammable gas.
  - near automatic doors or fire alarms or other automatically controlled devices.
- Keep this product at least 22 cm away from cardiac pacemakers. Radio waves from this product may adversely affect the operation of cardiac pacemakers.
- Do not disassemble or modify this product. Doing so could result in injury, electric shock, or fire.
Printing from a PC

You can print the images from a PC by installing the supplied software on your PC and connecting it to the printer.

This section explains how to install the supplied software on your PC and how to use the supplied PMB (Picture Motion Browser) software to print an image.

Please also refer to the operating instructions supplied with your PC for information on operating the PC.

Installation of the software is necessary only when you connect the printer to your PC for the first time.

On the supplied CD-ROM

The supplied CD-ROM contains the following software:

- Printer driver for the DPP-FP67/FP77: The software describes the printer’s requirements and enables printing from the PC.
- PMB (Picture Motion Browser): Sony’s original software application that allows you to handle photographs and moving images—this includes capturing, managing, processing, and printing.

Installing the software

System requirements

To use the supplied printer driver and PMB, you need a PC that meets the following system requirements:

Operating system for printer driver*1:
- Microsoft Windows Vista SP1 / Windows XP SP3 / Windows 2000 Professional SP4

Operating system for PMB*2:
- Microsoft Windows Vista SP1*3 / Windows XP SP3*4

- This printer driver does not run on Windows 2000 Professional SP2 or earlier, and Windows Me or earlier. This printer driver does not run on Macintosh.
- PMB cannot be installed on Windows 2000 or earlier. PMB does not run on Macintosh.
- 64-bit edition and Starter Edition are not supported.

CPU: Pentium III 500 MHz or faster (Pentium III 800 MHz or faster is recommended.)
RAM: 256 MB or more (512 MB or more is recommended.)
Hard disk space: 500 MB or more (Depending on the Windows version you are using, more space will be required. To handle image data, you will need additional hard disk space.)
Display setting: Screen resolution: 1024 × 768 dots or more
Screen colors: High Color (16-bit) or greater

Installing the printer driver

Follow the procedures below to install the driver.

Notes

- Do not connect the printer to the PC before installing the driver.
- Please log on to Windows using a “Computer administrator” user account.
- Be sure to close all running programs before installing the software.
- The dialog boxes shown in this section are from Windows Vista, unless otherwise specified. The installation procedures and the dialog boxes shown differ depending on the operating system.

1. Turn on your PC, start Windows, and insert the supplied CD-ROM into the CD-ROM drive of your PC. The installation window is displayed.

![Sony Digital Photo Printer DPP-FP67/77]

Notes

- If the installation window is not displayed automatically, double-click the “Setup.exe” file on the CD-ROM.
- In Windows Vista, the AutoPlay window may appear. Even if this occurs, select “Setup.exe” execution and install the driver according to the instructions on the screen.

2. Click “Installing Printer Driver.” The “InstallShield Wizard” dialog box is displayed.
3 Click “Next.”
The license agreement dialog box is displayed.

4 Read the agreement thoroughly, and if you agree, check “I accept this agreement” and click “Next.” When an older version of the printer driver has been installed on your computer, the message “Older version of the printer driver has been found.” may appear on the screen. Click “Yes,” and follow the displayed instructions to restart your PC. Then, perform the installation procedures again. After the computer is restarted, the older version of printer driver will be deleted. If you install the new version of printer driver, you can use the new version of printer driver.

5 Click “Install.”
Installation starts.

6 When the “Sony DPP-FP67/77 printer driver has been successfully installed.” dialog is displayed, click “Finish.”

7 Press the (on/standby) button to turn on the printer.

8 Connect the USB connectors of the printer and your PC with either the supplied or a commercially available USB cable.

9 Wait for a while, then check to see that “Sony DPP-FP67” or “Sony DPP-FP77” has been added to the “Printers” or “Printers and Faxes.”

10 When the installation is complete, remove the CD-ROM from your PC and keep it for future use.
To continue the process and install the PMB software, follow the procedures from step 2 on page 41.
Notes

- If the installation fails, remove the printer from your PC, restart your PC, and then follow the installation procedures from step 1 again.
- After installation, the “Sony DPP-FP67” or “Sony DPP-FP77” is not yet set as the default printer. Set the printer you use for each application.
- The supplied CD-ROM will be required when you uninstall or re-install the printer driver. Keep it for possible future use.
- Before you use the printer, read the Readme file (the Readme folder of the CD-ROM ➔ English folder ➔ Readme.txt).

When the software is installed

The icon is displayed on the Windows desktop, as well as a shortcut to the web site for printer customer registration. After you finish registration, you can find support information at: http://www.sony.net/registration/di/

Uninstalling the printer driver

When the printer driver becomes unnecessary, please follow the procedures below to remove the printer driver:

1. Disconnect the USB cable from your printer and the PC.
2. Insert the supplied CD-ROM into the CD-ROM drive of your PC.
   The installation window is displayed.

   Note

   If the installation window is not displayed automatically, double-click the “Setup.exe” file on the CD-ROM.

3. Click “Installing Printer Driver.”
   The “InstallShield Wizard” dialog box is displayed.
4. Click “Next.”
   The license agreement dialog box is displayed.

5. Read the agreement thoroughly, and if you agree, check “I accept this agreement” and click “Next.”
   The confirmation dialog box used for removing the software is displayed.
6. Click “Yes.”
   The confirmation dialog box used for restart is displayed.
7. Check “Yes, I want to restart my computer now” and click “OK.”
   After the computer is restarted, the relevant files will be deleted and uninstallation is complete.
Installing the PMB (Picture Motion Browser)

Follow the procedures below to install the PMB.

Notes
- Please log on to Windows using a “Computer administrator” user account.
- Be sure to close all running programs before installing the software.

If you have already installed one or more versions of PMB on your computer, check the version of the installed PMB. (Click [Help] on the menu bar of the PMB, and select [About PMB]. The version information is displayed.) Compare the version number of the supplied CD-ROM with that of the previously installed PMB, check to ensure that the versions have been installed in order, from the older to the newer. When the computer you are using has a newer version of PMB already installed, uninstall that version first, then reinstall both versions, starting with the older one first. If you install the newer version first, some functions of PMB may not operate correctly.

1 Turn on your PC, start Windows, and insert the supplied CD-ROM into the CD-ROM drive of your PC. The installation window is displayed (page 38).

2 Click “Installing PMB (Picture Motion Browser).” The “Choose Setup Language” dialog box is displayed.

3 After you select your language and clicking “Next,” the license agreement dialog box is displayed.

4 Read the agreement thoroughly, and if you agree, check “I accept the terms of the license agreement” and click “Next.” After you click “Next” in the license agreement dialog, the dialog box notifying you that the program is ready to installed is displayed.

5 Click “Install” and follow the instructions on the screen to proceed with installation. When you are prompted to restart your PC, follow the displayed instructions to restart it.

6 When the installation is complete, remove the CD-ROM from your PC and keep it for future use.

Notes
- If the installation fails, perform the installation procedures from step 2 again.
- The supplied CD-ROM will be required when you uninstall or re-install the PMB. Keep it in a safe place for possible future use.

Uninstalling the PMB

When this software is no longer needed, remove it from your PC as follows:

1 Click “Start” - “Control Panel.” The Control Panel is displayed.

2 Click “Uninstall a program.” Depending on the operating system, it may be called “Programs and Features” or “Add or Remove Programs.”

3 Select “Sony Picture Utility” and click “Change/Remove.” The software uninstallation process starts.
Printing photos from the PMB (Picture Motion Browser)

You can use the PMB to print an image from your PC using P size print paper.

1 Start the PMB window using either of the following methods:
   - Double-click (PMB) on the Windows desktop.
   - Click “Start” - “All Programs” (or “Programs” with Windows 2000) - “Sony Picture Utility” - “PMB.”
When the PMB is started for the first time, the dialog box used to register a viewed folder is displayed. If images have already been saved in the “Pictures” folder, click “Register Now.”
If you have saved images in a folder other than the “Pictures” folder, click “Register Later.” See “Registering a browsing folder” on page 45.

   Tip
In Windows XP/Windows 2000, please read “Pictures” as “My Pictures.”

How to access the “Pictures” folder
   - In Windows 2000:
     Click “My Documents” - “Pictures” on the desktop.
   - In Windows Vista/XP:
     Click “Start” - “Pictures” from the taskbar.

2 Click “Start.”
The main window of the PMB is displayed.
When the PMB is started for the second time, step 2 can be skipped.

In main window, there are the following two different views. To switch the view, click the “Folders” or “Calendar” tab in the right frame.

   • “Folders” view
     The images will be classified in each registered folder and are displayed as thumbnails.
   • “Calendar” view
     The images will be classified according to the shot date and are displayed as thumbnails on each date of the calendar. In “Calendar” view, you can switch the display by year, by month, or by hour. In this section, “Folders” view windows are used as examples.

3 Click the folder containing the photos you want to print.
As an example, the “sample” folder is selected in the following explanation.

4 Select the photos that you want to print and click (print).
The Print dialog box is displayed.
In the “Printer” drop-down list box, select “Sony DPP-FP67” or “Sony DPP-FP77.” To set the paper orientation or other print options, go to step 6. To print, skip to step 11.

To set the paper orientation or other print options, click “Properties.” The “Properties” dialog box of the selected printer is displayed. The printer driver of the printer utilizes the Universal Printer Driver, a Microsoft common printer driver. In the dialog boxes, there are some items that are not used within this printer.

In the “Layout” tab, specify the paper orientation or other options.

11 Click “Print.”
   Printing starts. For the details of the properties of the PMB, refer to the PMB help.

Note
You cannot print a motion-picture file or RAW data files.

Tips
- To select a series of still images in the image area of the main window, click the first image in the series and then click the last image while pressing the Shift key. To select multiple still images not in a sequence, click the images individually while pressing the Ctrl key.
- You can also print from an image preview.
- To cancel the printing operation, do the following.
  ① Double-click on the printer icon on the taskbar, and open the “Print” dialog box.
  ② Click the document name that you want to cancel printing of and then click “Cancel!” from the “Document” menu.
   The dialog box used for confirming the deletion is displayed.
  ③ Click “Yes.”
   The printing job is canceled.

Note
Do not remove the job being printed. Doing so may cause a paper jam.

Registering a browsing folder
PMB does not allow you to view images saved on the PC hard disk directly. You must first register the browsing folder as follows:

1 Click “File”-“Register Viewed Folder,” or click §. The “Register Folders to View” dialog box is displayed.

2 Select the folder you want to register and then click “Register.”

![Register Folders to View dialog box]

Note
You cannot register the whole drive.

The confirmation dialog box used for registration is displayed.

3 Click “Yes.”
Registration of the image information in the data base starts.

4 Click “Close.”

Notes
- The folder you select as the destination of the imported images will be registered automatically.
- You cannot cancel registration of the folder you register here.

To change the browsing folder
Click “Tools” - “Settings” - “Viewed folders.”

Continued
**Tips**

- If a sub folder is contained in the source folder, the images in the sub folder will also be registered.
- When the software is first started, a message prompting you to register “Pictures” will be displayed.
- Depending on the number of images, it may take some tens of minutes to register images.

**Printing from a commercially available software application**

You can use a commercially available software application to print an image from the DPP-FP67/FP77. Select “DPP-FP67” or “DPP-FP77” as a printer in the print dialog box, and select the print paper size in the page setup dialog box. For details of print settings, see steps 5 and 7 on page 43.

**On the “Borderless Print” setting in “Printer Features”**

When using an application other than the PMB, an image might be printed with borders even if you select “ON” for “Borderless Print” in “Printer Features” of the “Sony DPP-FP67/77 Advanced Options” dialog box.

When you select the borderless print option, the printing range information for borderless printing will be supplied to the application. Some applications, however, may arrange and print the image with borders within the specified range.

If this occurs, do the following to print an image without borders:

- When you can set the print range with an application, set an image to be printed fully within the available print range. For example, if you print images using “Windows Photo Gallery” of Windows Vista, select “Full page photo print” and check “Fit picture to frame.”

**Orientation setting**

Depending on the software application you use, orientation may not change even if you change portrait or landscape setting.

**With the Borders/Borderless setting of the printer driver**

When the software application you use has Borders/Borderless setting, we suggest you select “ON” for “Borderless Print” in “Printer Features” of the “Sony DPP-FP67/77 Advanced Options” dialog box as the printer driver setting.

**Print quantity setting**

Depending on the software application you are using, the print quantity setting of the application may have priority over the setting specified in the printer driver dialog box.

If paper jams

1 Turn off the power of the printer and then turn it on again. Please wait for the print paper to be ejected automatically.

2 Remove the ejected print paper from the printer.

3 Remove the paper tray and ink ribbon from the printer and check to ensure if there is no jammed print paper inside.

Note
If you cannot remove the jammed paper, contact your Sony dealer.
Cleaning

If white lines or period-like dots are printed on the pictures, the thermal transfer head may be soiled with the dust accumulated inside the printer. Use the cleaning cartridge and cleaning sheet supplied to clean inside the printer. Before you start cleaning the printer, please remove any memory cards, USB memories, or USB cables from the printer.

1 Open the ink ribbon compartment door and if there is an ink ribbon inserted, remove it.

2 Insert the supplied cleaning cartridge into the printer and close the ink ribbon compartment door.

3 Remove the paper tray from the printer. If there is print paper in the tray, remove it.

4 Place the cleaning sheet into the paper tray with the no-imprint side facing up.

5 Set the paper tray into the printer and press PRINT. The cleaning cartridge and cleaning sheet will clean inside the printer. After the cleaning is finished, the cleaning sheet is automatically ejected.

6 Remove the cleaning cartridge and sheet from the printer.

Tip
Keep the cleaning cartridge and cleaning sheet together for future cleanings.

Notes
- If you already enjoy proper printing performances, cleaning will not improve the printed picture quality.
- Do not place the cleaning sheet on top of print paper and carry out cleaning, as this may cause a paper jam or other troubles.
- If a cleaning does not improve printed picture quality, please carry out the cleaning process a couple of times.
- You cannot clean the printer while it is connected to a PC or a PictBridge camera.
Precautions

On safety

- Be careful not to set or drop any heavy objects on the power cord, or to damage the power cord in any way. Never operate this printer with a damaged power cord.
- Should any solid object or liquid fall into the cabinet, unplug the printer and have it checked by qualified personnel before operating it any further.
- Never disassemble the printer.
- To disconnect the power cord, pull it out by the plug. Never pull the power cord itself.
- When the printer is not going to be used for an extended period of time, disconnect the power cord from the wall outlet.
- Do not handle the printer roughly.
- To reduce the risk of electrical shock, always unplug the printer from the electrical outlet before cleaning and servicing the printer.

On installation

- Avoid placing the printer in a location subject to:
  - vibration
  - humidity
  - excessive dust
  - direct sunlight
  - extremely high or low temperatures
- Do not use electrical equipment near the printer. The printer will not work properly in electromagnetic fields.
- Do not place heavy objects on the printer.
- Leave enough room around the printer so that the ventilation holes are not blocked. Blocking these holes may cause internal heat build-up.

On the AC adaptor

- Be sure to use the AC adaptor supplied with the printer. Do not use other AC adaptors, as this may cause a malfunction.
- Do not use the supplied AC adaptor for other devices.
- In case the cord of the AC adaptor is damaged, do not use it any longer, as this may be dangerous.

On moisture condensation

If the printer is brought directly from a cold location to a warm location or placed in an extremely warm or humid room, moisture may condense inside the unit. In such cases the printer will probably not work properly and may even develop a fault if you persist in using it. If moisture condensation occurs, unplug the AC power cord of the printer and do not use the printer for at least one hour.

On transport

When you transport the printer, remove the ink ribbon, paper tray, AC adaptor, the memory card, or a USB memory from the printer and put the printer and its peripherals in the original box with the protective packaging.

If you no longer have the original box and packing parts, use similar packing material so that the printer will not be damaged while being transported.

On cleaning

Clean the cabinet, panel, and controls with a soft dry cloth, or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of solvent, such as alcohol or benzine, which may damage the finish.
On restrictions on duplication

When duplicating documents with the printer, pay special attention to the following:

- Duplication of banknotes, coins, or securities is against the law.
- Duplication of blank certificates, licenses, passports, private securities, or unused postal stamps is also against the law.
- TV programs, films, video tapes, portraits of other people or other materials may be copyrighted. Unauthorized video printing of such materials may infringe the provisions of the copyright law.

About the Memory Cards

“Memory Stick” media

Types of “Memory Stick” media that the printer can use

With the printer, you can use the following types of “Memory Stick” media*1:

<table>
<thead>

</tr>
</tbody>
</table>

*1 The printer supports FAT32. The printer has been demonstrated as operable with a “Memory Stick” media with a capacity of 8 GB or less manufactured by Sony Corporation. However, we do not guarantee the operations of all the “Memory Stick” media media.

*2 The printer is equipped with a slot compatible with both standard-size and Duo-size media. Without a “Memory Stick Duo” media adaptor, you can use both a standard-size “Memory Stick” media and the compact-size “Memory Stick Duo” media.

*3 When using a “Memory Stick Micro” media with the printer, always insert it into an “M2” adaptor.

*4 “M2” is an abbreviation for “Memory Stick Micro” media. In this section, “M2” is used to describe “Memory Stick Micro” media.

*5 Data reading that requires “MagicGate” copyright protection cannot be performed. “MagicGate” is the general name of a copyright protection technology developed by Sony using authentication and encryption.

*6 The printer does not support 8 bit parallel data transfer.
Notes on use

- Do not insert more than one “Memory Stick” media at the same time, which may cause trouble with the printer.
- If you insert a “Memory Stick Micro” media into the printer without an “M2” adaptor, you may be unable to remove the “Memory Stick Micro” media.
- If you insert a “Memory Stick Micro” media into an “M2” adaptor, and insert the “M2” adaptor into a “Memory Stick Duo” media adaptor, the printer may not operate properly.
- When you format a “Memory Stick” media, use the format function of your digital camera. If you format a “Memory Stick” media with your computer, images may not be displayed properly.
- When you format a “Memory Stick” media, all the data including protected image files will be erased. To avoid erasing important data by accident, make sure to check the contents of the “Memory Stick” media before formatting.
- Do not attach any other material than the supplied label on the labelling position. When you attach the supplied label, be sure to attach it to the labelling position. Be careful that the label does not stick out.

SD Memory Card

The SD Memory Card slot of the printer allows you to use the following:

- SD memory card*1
- miniSD card, microSD card
  (An adaptor is necessary.)*2
- SDHC memory card*2
- MMC standard memory card*3

We do not guarantee proper operations for all types of SD memory cards and MMC standard memory cards.

*1 The printer has been demonstrated as operable with an SD Memory Card with a capacity of 2 GB or smaller.
*2 The printer has been demonstrated as operable with an SDHC card with a capacity of 8 GB or less.
*3 The printer has been demonstrated as operable with an MMC standard memory card with a capacity of 2 GB or less.

Notes on use

Data reading that requires copyright protection cannot be performed.

xD-Picture Card

With the xD-Picture Card slot of the printer, you can use an xD-Picture Card*1. Not all the memory card operations are supported and we do not guarantee proper operations for all types of xD-Picture Card.

*1 The printer has been demonstrated as operable with an xD-Picture Card with a capacity of 2 GB or less.
The printer cannot write, delete, or format on a memory card.
When using a card, make sure to check the correct insertion direction of the card and the correct insertion slot.
Do not remove a card or turn off the printer while the printer is reading or accessing data, or the access indicator is flashing. Otherwise, data may be rendered unreadable or erased.
We recommend that you save a backup of important data.
Data processed with the computer may not be printed with the printer.
When you carry or store a card, put it in the case supplied with it.
Do not touch the terminal of a card with your hand or a metal object.
Do not strike, bend, or drop a card.
Do not disassemble or modify a card.
Do not expose a card to water.
Do not use or store a card under the following conditions:
- Locations beyond the required operational conditions including locations such as the hot interior of a car parked in the sun and/or in the summer, the outdoors exposed to direct sunlight, or a place near a heater.
- Humid locations or locations with corrosive substances present
- Locations subject to static electricity or electrical noises

Glossary

DCF (Design rule for Camera File system)
This printer conforms to the DCF (Design rule for Camera File system) standard established by JEITA (Japan Electronics and Information Technology Industries Association) to maintain file exchangeability and compatibility between digital cameras and related products. Complete exchangeability and compatibility, however, are not guaranteed.

DPOF (Digital Print Order Format)
The format used to record the information necessary for automatically printing images shot by a digital camera at a printing shop or with a home-use printer. The printer supports DPOF printing and can automatically print the preset number of copies of the DPOF preset images.

Exif 2.21 (Exif Print)
Exif (Exchangeable image file format for digital cameras) Print is a global standard for digital photo printing. A digital camera supporting Exif Print stores the data relevant to the conditions of shooting as each shot is taken.

“Memory Stick” media/SD Memory Card/xD-Picture Card
Compact, light, removable storage media. For details see pages 63 to 65.

PictBridge
A standard specified by the Camera & Imaging Products Association that allows you to connect a PictBridge-compliant digital camera directly to the printer without a PC, enabling direct printing on the spot.

Thumbnails
Miniature images for representing the original images that are stored in the image files taken by a digital camera. The printer uses thumbnails in the image list.
