Making Audio/Video Connections

Your new TV includes various types of video inputs and two types of audio jacks, RCA type and digital audio (optical). Use the outputs/inputs that are available on your components that provide the best audio/video performances.

- The connection diagrams shown below and on the reverse side are recommendations only; other possible solutions may exist. Connections that include an AV receiver can often be complex, so check your AV receiver's instruction manual for additional details.
- See the “Cables Required” chart that appears with the diagram to determine which cables you'll need. Depending on the components you plan to connect, you may need to purchase extra cables.

Running Initial Setup

1. Select the language for the OSD (on screen display).
2. Connect either cable or antenna to your TV (you can connect both using an A-B RF switch). If you connect cable, the TV will scan cable channels. After this scanning, you can search antenna channels as well.
   - If you have cable and antenna connection available, please connect cable first.
   - If you are not using the VHF/UHF CABLE connection to the TV, you can cancel the Auto Program by selecting Cancel.
3. Your TV will detect the type of signal connected and will start scanning for the channels.
4. If the Initial Setup programming found cable channels, you will be able to scan antenna channels as well. Connect the antenna (using an A-B RF switch, not supplied) and change the switch to antenna, then start Auto Program to search antenna channels.

Upgrade your signal to high-definition programming for stunning detail and richer sound.

For Your Convenience

Please contact Sony directly if you have questions on the use of your television after reading your Quick Setup Guide and Operating Instruction Manual.

Contact Sony Customer Support at:

- United States: 1-800-222-SONY (7669)
- Canada: 1-877-899-SONY (7669)

For further information, see the Operating Instruction Manual supplied with the TV.

Use this diagram if you have; Cable/Antenna

- **C**
  - If your DVD player or satellite receiver has an HDMI jack, use that instead of the component/composite video connections.
  - If you are not using a cable box, connect your cable to the VCR’s RF IN jack.

- **D**
  - Use this diagram if you have; Cable/Antenna
  - DVD Player
  - Rear of TV

- **E**
  - If your HD cable box and DVD player have HDMI jacks, use HDMI with the HD cable box and component video with the DVD player (as shown). This will give you the best possible picture quality.
  - Audio cables must be connected for sound when DVI connector is used.

- **F**
  - Use this diagram if you have; Cable/Antenna
  - Terrestrial Antenna
  - For best results, check the cable box’s manual for proper setup of the HD output.
