WARNING

To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.

To reduce the risk of fire, do not cover the ventilation opening of the apparatus with newspapers, tablecloths, curtains, etc. Do not place the naked flame sources such as lighted candles on the apparatus.

Do not install the appliance in a confined space, such as a bookcase or built-in cabinet.

To reduce the risk of fire or electric shock, do not expose this apparatus to dripping or splashing, and do not place objects filled with liquids, such as vases, on the apparatus.

As the main plug is used to disconnect the unit from the mains, connect the unit to an easily accessible AC outlet. Should you notice an abnormality in the unit, disconnect the main plug from the AC outlet immediately.

Do not expose batteries or apparatus with battery-installed to excessive heat such as sunshine, fire or the like.

The unit is not disconnected from the mains as long as it is connected to the AC outlet, even if the unit itself has been turned off.

Excessive sound pressure from earphones and headphones can cause hearing loss.

This symbol is intended to alert the user to the presence of the Hot Surface that may be hot if it is touched during the normal operation.

For customers in the United States

Owner’s Record

The model and serial numbers are located on the rear of the unit. Record these numbers in the space provided below. Refer to them whenever you call upon your Sony dealer regarding this product.

Model No. ___________ Serial No. ___________

This symbol is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Important Safety Instructions

1) Read these instructions.
2) Keep these instructions.
3) Heed all warnings.
4) Follow all instructions.
5) Do not use this apparatus near water.
6) Clean only with dry cloth.
7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11) Only use attachments/accessories specified by the manufacturer.
12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

13) Unplug this apparatus during lightning storms or when unused for long periods of time.
14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

The following FCC statement applies only to the version of this model manufactured for sale in the U.S.A. Other versions may not comply with FCC technical regulations.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION
You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

To reduce the risk of electric shock, the speaker cord should be connected to the apparatus and the speakers in accordance with the following instructions.
1) Disconnect the AC power cord from the MAINS.
2) Strip 10 to 15 mm of the wire insulation of the speaker cord.
3) Connect the speaker cord to the apparatus and the speakers carefully so as not to touch the core of the speaker cord by hand. Also disconnect the AC power cord from the MAINS before disconnecting the speaker cord from the apparatus and the speakers.

About This Manual

- The instructions in this manual are for model STR-DH710. Check your model number by looking at the lower right corner of the front panel. In this manual, models of area code U2 is used for illustration purposes unless stated otherwise. Any difference in operation is clearly indicated in the text, for example, “Models of area code U2 only”.
- The instructions in this manual describe the controls on the supplied remote. You can also use the controls on the receiver if they have the same or similar names as those on the remote.

About area codes
The area code of the receiver you purchased is shown on the lower right portion of the rear panel (see the illustration below).

Any differences in operation, according to the area code, are clearly indicated in the text, for example, “Models of area code AA only”.

1. I/Ω (on/standby) (page 33, 47, 54)
2. TONE +/–, TONE MODE (page 80)
3. INPUT SELECTOR (page 42 - 44, 46 - 48, 68, 70)
4. Display (page 8)
5. Remote sensor
   Receives signals from remote commander.
6. DIMMER (page 83)
7. MASTER VOLUME (page 41, 42)
8. MUTING (page 42)
9. VIDEO 2 IN jacks (page 30)
10. AUTO CAL MIC jack (page 35)
11. DISPLAY (page 43)
12. 2CH/A.DIRECT, A.F.D., MOVIE, MUSIC (page 50)
13. TUNING MODE, TUNING +/–, MEMORY/ENTER (page 45)
14. INPUT MODE (page 68)
15. PHONES jack (page 90)
16. SPEAKERS (page 33)
Indicators on the display

Indicator and explanation

1. **Playback channel indicators**
The letters (L, C, R, etc.) indicate the channels being played back. The boxes around the letters vary to show how the receiver downmixes or upmixes the source sound (based on the speaker settings).

- **SW**: Subwoofer
- **LH**: Front Left High
- **RH**: Front Right High
- **L**: Front Left
- **R**: Front Right
- **C**: Center (monaural)
- **SL**: Surround Left
- **SR**: Surround Right
- **S**: Surround (monaural or the surround components obtained by Pro Logic processing)

- **SBL**: Surround Back Left
- **SBR**: Surround Back Right
- **SB**: Surround Back (the surround back components obtained by 6.1 channel decoding)

**Example:**
Speaker pattern: 3/0.1
Recording format: 3/2.1
Sound Field: A.F.D. AUTO

2. **LFE**
Lights up when the disc being played back contains an LFE (Low Frequency Effect) channel and the LFE channel signal is actually being reproduced.

3. **Input indicators**
Light up to indicate the current input.

- **HDMI**: Lights up when
  - the receiver recognizes a component connected via an HDMI IN jack (page 24).
  - TV input detected Audio Return Channel (ARC) signals (page 59).
- **COAX**: Lights up when INPUT MODE is set to “AUTO” and the source signal is a digital signal being input through the COAXIAL jack (page 68).
- **OPT**: Lights up when INPUT MODE is set to “AUTO” and the source signal is a digital signal being input through the OPTICAL jack (page 68).
Indicator and explanation

4 DTS(-ES) indicators
Light up when DTS or DTS-ES signals are input.

DTS
Lights up when the receiver is decoding DTS signals.

DTS-ES
Lights up when the receiver is decoding DTS-ES signals.

DTS 96/24
Lights up when the receiver is decoding DTS 96 kHz/24 bit signals.

Note
When playing a DTS format disc, be sure that you have made digital connections and that INPUT MODE is set to “AUTO” (page 68).

5 NEO:6
Lights up when DTS Neo:6 Cinema/Music decoder is activated (page 51).

6 S-AIR
Lights up when the S-AIR transmitter (not supplied) is connected.

7 Dolby Pro Logic indicators
Lights up one of the respective indicators when the receiver performs Dolby Pro Logic processing. This matrix surround decoding technology can enhance input signals.

[ ] PL Dolby Pro Logic
[ ] PL II Dolby Pro Logic II
[ ] PL IIx Dolby Pro Logic IIx
[ ] PL IIz Dolby Pro Logic IIz

Note
These indicators may not light up depending on the speaker pattern setting.

8 Dolby Digital Surround indicators
Lights up one of the respective indicators when the receiver is decoding the corresponding Dolby Digital format signals.

D Dolby Digital
D EX Dolby Digital Surround EX
D+ Dolby Digital Plus
TrueHD Dolby TrueHD

Note
When playing a Dolby Digital format disc, be sure that you have made digital connections and that INPUT MODE is set to “AUTO” (page 68).

9 SLEEP
Lights up when the sleep timer is activated (page 44).

10 D.RANGE
Lights up when dynamic range compression is activated (page 76).

11 Tuning indicators
Lights up when the receiver tunes in radio stations.

ST
Stereo broadcast
RDS (Models of area code AU1, TW2 only)
A station that provides RDS services is tuned in.

Preset station number

Note
The preset station number will change according to the preset station you select. For details on presetting radio stations, see page 48.

12 LPCM
Lights up when Linear PCM signals are detected.

13 DTS-HD indicators
Lights up one of the respective indicators when the receiver is decoding the corresponding DTS-HD format signals.

DTS-HD MSTR
DTS-HD Master Audio
DTS-HD HI RES
DTS-HD High Resolution Audio
DTS-HD LBR
DTS-HD Low Bit Rate Audio
Rear panel

1. S-AIR section (page 31)
   - EZW-T100 slot

2. DMPORT section (page 70)
   - DMPORT jack

3. ANTENNA section (page 31)
   - FM ANTENNA jack
   - AM ANTENNA terminals

4. Audio signal section
   - DIGITAL INPUT/OUTPUT jacks (page 21, 24, 27, 28, 29)
     - HDMI IN/OUT
     - OPTICAL IN
     - COAXIAL IN
   - ANALOG INPUT/OUTPUT jacks (page 19, 21, 22, 27, 29)
     - White (L) AUDIO IN/OUT
     - Red (R) AUDIO IN/OUT
     - Black AUDIO OUT
5 Video signal section*
The image quality depends on the connecting jack.

DIGITAL INPUT/OUTPUT jacks (page 21, 24)

HDMI IN/OUT

COMPONENT VIDEO INPUT/OUTPUT jacks (page 21, 27, 28, 29)

- Green (Y) Y, Pb/Cb, Pr/Cr IN/OUT
- Blue (Pb/Cb)
- Red (Pr/Cr)

COMPOSITE VIDEO INPUT/OUTPUT jacks (page 21, 27, 29, 30)

- Yellow VIDEO IN/OUT

6 SPEAKERS section (page 19)

* You can watch the selected input image when you connect the HDMI TV OUT or MONITOR OUT jack to a TV (page 21, 24).

Remote commander
You can use the supplied remote RM-AAU073 (Models of area code U2, CA2 only) or RM-AAU075 (Models of area code AU1, TW2 only) to operate the receiver and to control the Sony audio/video components that the remote is assigned to operate.
Notes on using the SHIFT (15) and TV (16) button

**SHIFT (15) button**
Press and hold SHIFT (15), then press the button with pink printing that you want to use. Example: Press and hold SHIFT (15), then press ENTER (3).

**TV (16) button**
Press and hold TV (16), then press the button with yellow printing to control the TV. Example: Press and hold TV (16), then press TV CH + (RM-AAU073 only) or PROG + (RM-AAU075 only) (14).

To control a Sony TV
Press and hold TV (16) and then press the yellow printing button to select the function you want.

Name and function

**1** TV I/ (on/standby)
Turns the TV on or off.

**2** Numeric buttons (number 50)
Selects the TV channels.

ENTER (RM-AAU073 only)
Enters the selections.

(Previous channel) (RM-AAU075 only)
Returns to the previous channel watched (for more than five seconds).

(Text) (RM-AAU075 only)
Displays text.

**6** DISPLAY (RM-AAU073 only)
Displays the information of TV.

(Info/Text reveal) (RM-AAU075 only)
In digital mode: Displays brief details of the program currently being watched.
In analog mode: Displays information such as current channel number and screen format.
In text mode: Reveals hidden information (e.g. answers to a quiz).

**8** Color buttons
Displays an operation guide on the TV screen when the color buttons are available. Follow the operation guide to perform a selected operation.

**11** TOOLS/OPTIONS
Displays the TV options.

**12** MENU/HOME
Displays the TV menus.

**14** TV CH +/– (RM-AAU073 only)
Selects the next (+) or previous (–) channel.

PROG +/–, (RM-AAU075 only)
In TV mode: Selects the next (+) or previous (–) channel.
In text mode: Selects the next ( ) or previous ( ) channel.

**17** TV VOL +/- (RM-AAU073 only)
(–) (RM-AAU075 only)
Adjusts the volume.

**18** MUTING (RM-AAU073 only)
Acts the TV's muting function.

(a) The following buttons have tactile dots.
- RM-AAU073: 5/VIDEO 1, AUDIO, ▶ and TV CH +/-SOUND FIELD +
- RM-AAU075: 5/VIDEO 1, ▲▼, ▶ and PROG +/-SOUND FIELD +/-

Use the tactile dots as references when operating the receiver.

(b) If you press AV I/ (1) and I/ (2) simultaneously, the receiver and connected components will turn off (SYSTEM STANDBY).
The function of the AV I/ (1) changes automatically each time you press the input buttons (3).

(c) Press and hold SHIFT (15) then press this button.

(d) RM-AAU073 only.

e) RM-AAU075 only.

f) This button is also available for DIGITAL MEDIA PORT adapter operation. For details on the function of the button, refer to the operating instructions supplied with the DIGITAL MEDIA PORT adapter.

Notes
- Some functions explained in this section may not work depending on the model.
- The above explanation is intended to serve as an example only. Therefore, depending on the component, the above operation may not be possible or may operate differently than described.
Inserting batteries into the remote

Insert two R6 (size-AA) batteries in the RM-AAU073 (Models of area code U2, CA2 only) or RM-AAU075 (Models of area code AU1, TW2 only) Remote Commander. Observe the correct polarity when installing batteries.

Notes
• Do not leave the remote in an extremely hot or humid place.
• Do not use a new battery with old ones.
• Do not mix manganese batteries and other kinds of batteries.
• Do not expose the remote sensor to direct sunlight or lighting apparatuses. Doing so may cause a malfunction.
• If you do not intend to use the remote for an extended period of time, remove the batteries to avoid possible damage from battery leakage and corrosion.
• When you replace the batteries, the remote buttons may be reset to their initial settings. If this happens, reassign the button again (page 84).
• When the remote no longer operates the receiver, replace all the batteries with new ones.

Connections

1: Installing the speakers

This receiver allows you to use a 7.1 channel system (7 speakers and one subwoofer).

To fully enjoy theater-like multi channel surround sound requires five speakers (two front speakers, a center speaker, and two surround speakers) and a subwoofer (5.1 channel).

You can enjoy high fidelity reproduction of DVD software recorded sound in the Surround EX format if you connect additional one surround back speaker (6.1 channel) or two surround back speakers (7.1 channel).

You can enjoy vertical sound effects if you connect additional two front high speakers (7.1 channel) in PLIIz mode (page 51).
Example of speaker system configuration

A Front speaker (Left)
B Front speaker (Right)
C Center speaker
D Surround speaker (Left)
E Surround speaker (Right)
F Surround back speaker (Left)
G Surround back speaker (Right)
H Front high speaker (Left)
I Front high speaker (Right)
J Subwoofer

Note
You cannot use the surround back speakers and the front high speakers simultaneously.

Tips
- When you connect a 7.1 channel speaker system with two surround back speakers, all angle A should be the same.

- When you connect a 7.1 channel speaker system with two front high speakers, place the front high speakers at an angle between 22° to 45°. Position the front high speakers at least 3.3 feet (1 meter) directly above the front speakers.
• When you connect a 6.1 channel speaker system, place the surround back speaker behind the listening position.

• Since the subwoofer does not emit highly directional signals, you can place it wherever you want.
2: Connecting the speakers

Before connecting the cords, be sure to disconnect the AC power cord (mains lead).

- **A** Monaural audio cord (not supplied)
- **B** Speaker cord (not supplied)
a) Notes on the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/Front B terminals connection.
- If you connect only one surround back speaker, connect it to the L of this terminals.
- If you are not using surround back speaker or front high speakers, and you have an additional front speaker system, connect the additional front speaker system to this terminals.

Set “SB ASGN” to “SPK B” in the SPEAKER menu (page 79).
You can select the front speaker system you want to use with the SPEAKERS button on the receiver (page 33).
- If you are not using surround back speaker or front high speakers, you can connect the front speakers to this terminals using bi-amplifier connection (page 20).

b) When you connect a subwoofer with an auto standby function, turn off the function when watching movies. If the auto standby function is set to on, it turns to standby mode automatically based on the level of the input signal to a subwoofer, then sound may not be output.

Notes
- Before connecting the AC power cord (mains lead), make sure that metallic wires of the speaker cords are not touching each other between the SPEAKERS terminals.
- After you have install and connect your speaker, be sure to select the speaker pattern from SPEAKER menu (page 77).

Bi-amplifier connection

If you are not using surround back speakers or front high speakers, you can connect the front speakers to the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/Front B terminals using a bi-amplifier connection.

Connect the jacks on the Lo (or Hi) side of the front speakers to the SPEAKERS FRONT A terminals, and connect the jacks on the Hi (or Lo) side of the front speakers to the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/Front B terminals. Make sure that metal fittings of Hi/Lo attached to the speakers have been removed from the speakers. Not doing so may cause a malfunction of the receiver.
After you have made the bi-amplifier connection, set “SB ASGN” to “BI-AMP” in the SPEAKER menu (page 70).
3: Connecting the TV

Before connecting cords, be sure to disconnect the AC power cord (mains lead).

A Component video cord (not supplied)
B Video cord (not supplied)
C Optical digital cord (not supplied)
D Audio cord (not supplied)
E HDMI cable (not supplied)

We recommend that you use a Sony HDMI cable.

Recommended connection
--- Alternative connection

To enjoy TV multi channel surround sound broadcasting from the speakers connected to the receiver, connect either C or E.
Be sure to turn off the TV’s volume or activate the TV’s muting function.

If your TV is compatible with the Audio Return Channel (ARC) function, the TV sound will output from the speakers connected to the receiver via HDMI TV OUT connection. In this case, set “ARC” to “ARC ON” in HDMI menu (page 59).
Notes
• Be sure to turn on the receiver when the video and audio signals of a playback component are being output to a TV via the receiver. Unless the power is turned on, neither video nor audio signals will be transmitted.
• Connect image display components such as a TV monitor or a projector to the HDMI TV OUT or MONITOR OUT jack on the receiver. You may not be able to record even if you connect recording components.
• Depending on the status of the connection between the TV and the antenna (aerial), the image on the TV screen may be distorted. In this case, place the antenna (aerial) farther away from the receiver.
• When connecting optical digital cords, insert the plugs straight in until they click into place.
• Do not bend or tie optical digital cords.

Tip
All the digital audio jacks are compatible with 32 kHz, 44.1 kHz, 48 kHz, and 96 kHz sampling frequencies.

4a: Connecting the audio components

The following illustration shows how to connect a Super Audio CD player, CD player, CD recorder and DIGITAL MEDIA PORT adapter. Before connecting cords, be sure to disconnect the AC power cord (mains lead).

A Audio cord (not supplied)
B Video cord (not supplied)
Notes on connecting DIGITAL MEDIA PORT adapter

- Do not connect an adapter other than the DIGITAL MEDIA PORT adapter.
- Do not connect or disconnect the DIGITAL MEDIA PORT adapter while the receiver is turned on.
- When connecting the DIGITAL MEDIA PORT adapter, be sure the connector is inserted with the arrow mark facing towards the arrow mark on the DMPORT jack.
- Be sure to make DMPORT connections firmly, insert the connector straight in.
- As the connector of the DIGITAL MEDIA PORT adapter is fragile, be sure to handle with care when placing or moving the receiver.

To detach the DIGITAL MEDIA PORT adapter from DMPORT jack

Press and hold both sides of the connector and then pull out the connector.
4b: Connecting the video components

Connect your video components according to the table below.

<table>
<thead>
<tr>
<th>Component</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blu-ray disc player*</td>
<td>24, 27</td>
</tr>
<tr>
<td>“PlayStation 3”*</td>
<td>24</td>
</tr>
<tr>
<td>DVD player*</td>
<td>24, 28</td>
</tr>
<tr>
<td>DVD recorder*</td>
<td>24, 28, 30</td>
</tr>
<tr>
<td>Satellite tuner*, cable TV tuner*</td>
<td>24, 29</td>
</tr>
<tr>
<td>VCR</td>
<td>30</td>
</tr>
<tr>
<td>Camcorder, video game, etc.</td>
<td>30</td>
</tr>
</tbody>
</table>

* We recommend that you connect your video components via HDMI connection if they have HDMI jacks.

You can watch the selected input image when you connect the HDMI TV OUT or MONITOR OUT jack to a TV (page 21).

If you want to connect several digital components, but cannot find an unused input

See “Enjoying the sound/images from other inputs” (page 68).

Notes

- Before connecting cords, be sure to disconnect the AC power cord (mains lead).
- It is not necessary to connect all the cords. Connect according to the availability of jacks on the connected components.
- Be sure to turn on the receiver when the video and audio signals of a playback component are being output to a TV via the receiver. Unless the power is turned on, neither video nor audio signals will be transmitted.
- When connecting optical digital cords, insert the plugs straight in until they click into place.
- Do not bend or tie optical digital cords.

Tip

All the digital audio jacks are compatible with 32 kHz, 44.1 kHz, 48 kHz, and 96 kHz sampling frequencies.

Connecting components with HDMI jacks

HDMI is the abbreviated name for High-Definition Multimedia Interface. It is an interface which transmits video and audio signals in digital format.

HDMI features

- A digital audio signals transmitted by HDMI can be output from the speakers connected to the receiver. This signal supports Dolby Digital, DTS, and Linear PCM.
- This receiver can receive multi channel Linear PCM (up to 8 channels) with a sampling frequency of 192 kHz or less with an HDMI connection.
- This receiver supports High Bitrate Audio (DTS-HD Master Audio, Dolby TrueHD) and HDMI (Deep Color (Deep Colour), x.v.Color (x.v.Colour)).
- This receiver supports the Control for HDMI function. For details, see ““BRAVIA” Sync Features” (page 55).
**A** HDMI cable (not supplied)

We recommend that you use a Sony HDMI cable.

* See page 21 for the audio connection of TV to the receiver.

**Notes**

- Be sure to change the initial setting of the HDMI 1-3 input button on the remote so that you can use the button to control your components. For details, see “Changing the input button assignments” (page 84).
- You can also rename the HDMI input so that it can be displayed on the receiver’s display. For details, see “Naming inputs” (page 43).
Notes on connecting cables
- Use a High Speed HDMI cable. If you use a Standard HDMI cable, 1080p or Deep Color (Deep Colour) images may not be displayed properly.
- Sony recommends that you use an HDMI authorized cable or Sony HDMI cable.
- We do not recommend using an HDMI-DVI conversion cable. When you connect an HDMI-DVI conversion cable to a DVI-D component, the sound and/or the image may not be output. Connect other audio cords or digital connecting cords, then set “A. ASSIGN” in AUDIO menu (page 81) when the sound is not output correctly.

Notes on HDMI connections
- An audio signal input to the HDMI IN jack is output from the SPEAKERS jacks and HDMI TV OUT jack. It is not output from any other audio jacks.
- Video signals input to the HDMI IN jack can only be output from the HDMI TV OUT jack. The video input signals cannot be output from the VIDEO OUT jacks or MONITOR OUT jacks.
- When you want to listen to the sound from the TV speaker, set “AUDIO.OUT” to “TV+AMP” in the HDMI menu (page 82). If you cannot play back multi channel software, set to “AMP”. However, the sound will not output from the TV speaker.
- Be sure to turn on the receiver when video and audio signals of a playback component are being output to a TV through this receiver. If you set “PASS.THRU” to “OFF”, video and audio signals will not be transmitted when the power is set to off.
- DSD signals of Super Audio CD are not input and output.
- The multi/stereo area audio signals of a Super Audio CD are not output.
- Audio signals (sampling frequency, bit length, etc.) transmitted from an HDMI jack may be suppressed by the connected component. Check the setup of the connected component if the image is poor or the sound does not come out of a component connected via the HDMI cable.
- Sound may be interrupted when the sampling frequency, the number of channels or audio format of audio output signals from the playback component is switched.
- When the connected component is not compatible with copyright protection technology (HDCP), the image and/or the sound from the HDMI TV OUT jack may be distorted or may not be output. In this case, check the specification of the connected component.
- Set the image resolution of the player to more than 720p/1080i to enjoy High Bitrate Audio (DTS-HD Master Audio, Dolby TrueHD).
- The image resolution of player may need certain settings be made before you can enjoy multi channel Linear PCM. Refer to the operating instructions of the player.
- Not every HDMI component supports all functions that are defined by the specified HDMI version. For example, components that support HDMI, version 1.4, may not support Audio Return Channel (ARC).
- Refer to the operating instructions of each connected component for details.
The following illustration shows how to connect a Blu-ray disc player.

A Component video cord (not supplied)  
B Video cord (not supplied)  
C Optical digital cord (not supplied)  
D Coaxial digital cord (not supplied)  
E Audio cord (not supplied)

Notes
• The initial setting of the COMPONENT VIDEO IN 1 jacks are Blu-ray disc player. If you want to connect your Blu-ray disc player to the COMPONENT VIDEO IN 2 or IN 3 jacks, set "V. ASSIGN" in the VIDEO menu (page 81).
• To input multi channel digital audio from the Blu-ray disc player, set the digital audio output setting on the Blu-ray disc player. Refer to the operating instructions supplied with the Blu-ray disc player.

* When you connect a component equipped with a OPTICAL/COAXIAL jack, set “A. ASSIGN” in the AUDIO menu (page 81).
### Connecting a DVD player, DVD recorder

The following illustration shows how to connect a DVD player or DVD recorder.

<table>
<thead>
<tr>
<th>Video signals</th>
<th>Audio signals</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image.png" alt="Diagram" /></td>
<td><img src="image.png" alt="Diagram" /></td>
</tr>
</tbody>
</table>

**A** Component video cord (not supplied)  
**B** Optical digital cord (not supplied)  
**C** Coaxial digital cord (not supplied)

### Recommended connection  
### Alternative connection

* When you connect a component equipped with an OPTICAL jack, set “A. ASSIGN” in the AUDIO menu (page 81).

### Notes

- The initial setting for the DVD input button is as follows:
  - RM-AAU073: DVD player
  - RM-AAU075: DVD recorder
  Be sure to change the initial setting of the DVD input button on the remote so that you can use the button to control your DVD player or DVD recorder. For details, see “Changing the input button assignments” (page 84).
- You can also rename the DVD input so that it can be displayed on the receiver’s display. For details, see “Naming inputs” (page 43).

- The initial setting of the COMPONENT VIDEO IN 2 jacks are DVD player or DVD recorder. If you want to connect your DVD player or DVD recorder to the COMPONENT VIDEO IN 1 or IN 3 jacks, set “V. ASSIGN” in the VIDEO menu (page 81).
- To input multi channel digital audio from the DVD player or DVD recorder, set the digital audio output setting on the DVD player or DVD recorder. Refer to the operating instructions supplied with the DVD player or DVD recorder.
Connecting a satellite tuner, cable TV tuner

The following illustration shows how to connect a satellite tuner or cable TV tuner.

---

**Satellite tuner, cable TV tuner**

<table>
<thead>
<tr>
<th>Video signals</th>
<th>Audio signals</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A</strong> Component video cord (not supplied)</td>
<td><strong>C</strong> Optical digital cord (not supplied)</td>
</tr>
<tr>
<td><strong>B</strong> Video cord (not supplied)</td>
<td><strong>D</strong> Audio cord (not supplied)</td>
</tr>
</tbody>
</table>

**Note**

The initial setting of the COMPONENT VIDEO IN 3 jacks are satellite tuner or cable TV tuner. If you want to connect your satellite tuner or cable TV tuner to the COMPONENT VIDEO IN 1 or IN 2 jacks, set “V. ASSIGN” in the VIDEO menu (page 81).
Connecting components with analog video and audio jack

The following illustration shows how to connect a component which has analog jacks such as a VCR, DVD recorder, etc.

Notes
- Be sure to change the initial setting of the VIDEO 1 input button on the remote so that you can use the button to control your DVD recorder. For details, see “Changing the input button assignments” (page 84).
- You can also rename the VIDEO 1 input so that it can be displayed on the receiver’s display. For details, see “Naming inputs” (page 43).

A Video cord (not supplied)
B Audio cord (not supplied)
C Audio/video cord (not supplied)
5: Connecting the antennas (aerials)

Connect the supplied AM loop antenna (aerial) and FM wire antenna (aerial). Before connecting antennas (aerials), be sure to disconnect the AC power cord (mains lead).

Notes
- To prevent noise pickup, keep the AM loop antenna (aerial) away from the receiver and other components.
- Be sure to fully extend the FM wire antenna (aerial).
- After connecting the FM wire antenna (aerial), keep it as horizontal as possible.

6: Inserting the wireless transmitter/transceiver

To use the S-AIR function, you need to insert the wireless transmitter (not supplied) into the S-AIR main unit (this receiver) and the wireless transceiver (not supplied) into the S-AIR sub unit.

Notes
- Before inserting the wireless transmitter/transceiver, be sure to disconnect the AC power cord (mains lead).
- Do not touch the terminals of the wireless transmitter/transceiver.

To insert the wireless transmitter into the S-AIR main unit

1. Remove the screws.

Note
Remove the screws pointed with ↑ mark. Do not remove other screws.

continued
2 Insert the wireless transmitter.

Insert the wireless transmitter with the S-AIR logo facing up.
Insert the wireless transmitter so that the ▼ marks are aligned.
Do not insert other than the wireless transmitter into the EZW-T100 slot.

3 Use the screws that you removed from step 1 to fasten the wireless transmitter.

Note
Do not use other screws to fasten the wireless transmitter.

7: Connecting the AC power cord (mains lead)

Connect the AC power cord (mains lead) to a wall outlet.

Notes
• Before connecting the AC power cord (mains lead), make sure that metallic wires of the speaker cords are not touching each other between the SPEAKERS terminals.
• Connect the AC power cord (mains lead) firmly.

To insert the wireless transceiver into the S-AIR sub unit
Refer to the operating instructions supplied with the surround amplifier and S-AIR receiver.
Preparing the Receiver

 Initializing the receiver

Before using the receiver for the first time, initialize the receiver by performing the following procedure. This procedure can also be used to return settings you have made to their initial settings. Be sure to use the buttons on the receiver for this operation.

1. Press I/O to turn off the receiver.

2. Hold down I/O for 5 seconds.
   After “CLEARING” appears on the display for a while, “CLEARED” appears. All the settings you have changed or adjusted are reset to the initial settings.

Selecting the speaker system

You can select the front speakers you want to drive. Be sure to use the buttons on the receiver for this operation.

Press SPEAKERS repeatedly to select the front speaker system you want to drive.

<table>
<thead>
<tr>
<th>To select the front speakers connected to</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>The SPEAKERS FRONT A terminals</td>
<td>SPK A</td>
</tr>
<tr>
<td>The SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/FRONT B terminals</td>
<td>SPK B*</td>
</tr>
<tr>
<td>Both the SPEAKERS FRONT A and SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/FRONT B terminals (parallel connection)</td>
<td>SPK A+B*</td>
</tr>
</tbody>
</table>

* To select “SPK B” or “SPK A+B”, set “SB ASGN” to “SPK B” in the SPEAKER menu (page 79).

To turn off the speaker output

Press SPEAKERS repeatedly until “SPK OFF” appears on the display.

Note
This setting is not available when the headphones are connected.
Calibrating the appropriate speaker settings automatically (AUTO CALIBRATION)

This receiver is equipped with DCAC (Digital Cinema Auto Calibration) Technology which allows you to perform automatic calibration as follows:

- Check the connection between each speaker and the receiver.\(^a\)
- Adjust the speaker level.
- Measure the distance of each speaker from your listening position.\(^a,b\)
- Measure the speaker size.\(^a\)
- Measure the speaker polarity.
- Measure the frequency characteristics.\(^a,c\)

\(^a\) The measurement result is not utilized when Analog Direct is selected.
\(^b\) The measurement result is not utilized when signals with a sampling frequency of more than 96 kHz are being received.
\(^c\) The measurement result is not utilized when signals with a sampling frequency of more than 48 kHz are being received.

The DCAC is designed to obtain proper sound balance in your room. However, you can adjust the speaker levels manually according to your preference. For details, see “Adjusting the speaker levels (TEST TONE)” (page 40).

Before you perform Auto Calibration

Before you perform Auto Calibration, check the following items:
- set up and connect the speakers (page 16, 19).
- connect only the supplied optimizer microphone to the AUTO CAL MIC jack. Do not connect other microphones to this jack.
- set “SB ASGN” to “BI-AMP” in SPEAKER menu if you use bi-amplifier connection (page 79).
- set “SB ASGN” to “SPK B” in SPEAKER menu if you use speakers front B connection (page 79).
- pair the surround amplifier to S-AIR main unit if you want to use surround amplifier.
- speaker output is not set to “SPK OFF”.
- disconnect the headphones.
- remove any obstacles in the path between the optimizer microphone and the speakers to avoid measurement error.
- make sure the environment is quiet to avoid the effect of noise and get a more accurate measurement.
- select the seating position as position 1, 2 or 3 to save the Auto Calibration result (page 39).

Notes
- During the calibration, the sound that comes out of the speakers is very loud. The volume of the sound cannot be adjusted. Pay attention to the presence of children or to the effect on your neighborhood.
- If the muting function has been activated before you perform Auto Calibration, the muting function will be set to off automatically.
1: Setting up the Auto Calibration

1. Connect the supplied optimizer microphone to the AUTO CAL MIC jack.

2. Set up the optimizer microphone.
   Place the optimizer microphone at your listening position. Use a stool or tripod so that the optimizer microphone remains at the same height as your ears.

On setting up the active subwoofer
- When a subwoofer is connected, turn on the subwoofer and turn up the volume beforehand. Turn the MASTER VOLUME knob to just before the mid-point.

- If you connect a subwoofer with a crossover frequency function, set the value to the maximum.
- If you connect a subwoofer with an auto standby function, set this function to off (deactivated).

Note
Depending on the characteristics of the subwoofer you are using, the setup distance value may be further away from the actual position.

2: Performing Auto Calibration

* Be sure to set the speaker pattern setting with front high speakers (page 77).

When using surround back speakers

When using front high speakers

* Be sure to set the speaker pattern setting with front high speakers (page 77).

Input buttons

AMP MENU

MUTING/ MASTER VOL +/–

continued
1 Press AMP MENU.

2 Press ↑/↓ repeatedly to select “A. CAL”, then press [+ or -]. “START” appears on the display.

3 Press [+]. Measurement starts in 5 seconds. A countdown is displayed. The measurement process will take approximately 30 seconds to complete. The table below shows the display when measurement starts.

<table>
<thead>
<tr>
<th>Measurement for</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Speaker existence</td>
<td>TONE</td>
</tr>
<tr>
<td>Speaker gain, distance, frequency response</td>
<td>T. S. P.*</td>
</tr>
<tr>
<td>Subwoofer gain and distance</td>
<td>WOOFER*</td>
</tr>
</tbody>
</table>

* The corresponding speaker indicator lights up in the display during measurement.

**Tips**

- Operations other than turning the receiver on or off are deactivated during the measurement.
- The measurements may not be performed correctly or Auto Calibration cannot be performed when special speakers, such as dipole speakers are used.

To cancel Auto Calibration

The Auto Calibration function will be canceled when you do the following during the measurement process:

- Press I/O.
- Press the input buttons or turn the INPUT SELECTOR on the receiver.
- Change the volume level.
- Press MUTING (RM-AAU073 only) or (RM-AAU075 only).
- Press the SPEAKERS button on the receiver.
- Connect headphones.

3: Confirming/saving the measurement results

1 Confirm the measurement result.

When the measurement ends, a beep sounds and the measurement result appears on the display.

<table>
<thead>
<tr>

<tr>
<td>Adjusts the characteristics of all speakers to match the characteristics of the front speaker.</td>
</tr>
<tr>
<td><strong>OFF</strong></td>
</tr>
<tr>
<td>Sets the Auto Calibration equalizer level to off.</td>
</tr>
</tbody>
</table>

5 Disconnect the optimizer microphone after you have finished.

**Note**
If you have reposition your speaker, we recommend that you perform Auto Calibration again to enjoy the surround sound.

**Tip**
The size of a speaker (LARGE/SMALL) is determined by the low frequency characteristics. The measurement results may vary, depending on the position of the optimizer microphone and speakers, and the shape of the room. It is recommended that you follow the measurement results. However, you can change those settings in the SPEAKER menu (page 77). Save the measurement results first, then try to change the settings if you want.

When error codes appear

1 Check the problem of the error.

<table>
<thead>
<tr>
<th>Display and explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><em><em>E - 终止</em> 31</em>*</td>
</tr>
<tr>
<td>SPEAKERS is set to “SPK OFF”. Set it to others (page 33) and perform the measurement again.</td>
</tr>
<tr>
<td><em><em>E - 终止</em> 32</em>*</td>
</tr>
<tr>
<td>None of the speakers were detected. Make sure that the optimizer microphone is connected properly and perform the measurement again. If the optimizer microphone is connected properly but the error code appears, the optimizer microphone cable may be damaged or improperly connected.</td>
</tr>
<tr>
<td><em><em>E - 终止</em> 33</em>*</td>
</tr>
<tr>
<td>• None of the front speakers are connected or only one front speaker is connected.</td>
</tr>
<tr>
<td>• The optimizer microphone is not connected.</td>
</tr>
<tr>
<td>• Either the left or right surround speakers is not connected.</td>
</tr>
<tr>
<td>• Surround back speakers or front high speakers are connected even though surround speakers are not connected. Connect the surround speaker(s) to the SPEAKERS SURROUND terminals. The surround back speaker is connected only to the SPEAKERS SURROUND BACK/FRONT HIGH/Bi-AMP/FRONT B L terminals. When you connect only one surround back speaker, connect it to the SPEAKERS SURROUND BACK/FRONT HIGH/Bi-AMP/FRONT B R terminals.</td>
</tr>
<tr>
<td>• Either the front left high or front right high speaker is not connected.</td>
</tr>
</tbody>
</table>

2 Perform Auto Calibration again. Press ⊕. “RETRY Y” will appears on the display, then press ⊕.

3 Repeat steps in “3: Confirming/saving the measurement results” (page 36).
Checking the measurement results

When you select “P. INFO.”
You can check the phase of each speaker (in phase/out of phase).

1 Press ↻/ fauceted repeatedly to select a speaker you want to check.

Display and explanation

- ■■■* IN
  The speaker is in phase.

- ■■■* OUT
  The speaker is out of phase. The “+” and “−” terminals of the speaker may be connected the other way around. However, depending on the speakers, “■■■ OUT” appears on the display even though the speakers are connected properly. This is because of the speakers’ specifications. In this case, you can continue to use the receiver.

2 Press + to return to step 2 of “3: Confirming/saving the measurement results” (page 36).

When you select “WARN CHK”
If a warning on the measurement result is present, detailed information is displayed.

Display and explanation

- W - ■■■* 40
  The measurement has completed. However, the noise level is high. You may be able to perform the measurement properly if you try it again, even though the measurement cannot be performed in all environments. Try to perform the measurement in a quiet environment.

- W - ■■■* 41
  The sound input from the optimizer microphone is outside the acceptable range. It is louder than the loudest sound that can be measured. Try to perform the measurement when the environment is quiet enough to allow proper measurement.

- W - ■■■* 42
  The volume of the receiver is out of the acceptable range. Try to perform the measurement when the environment is quiet enough to allow proper measurement.

Tip
Depending on the position of the subwoofer, the measurement results for polarity may vary. However, there will be no problems even if you continue to use the receiver with that value.
Preparing the Receiver

You can use the AUTO CAL menu to make various adjustments for Auto Calibration settings and to name the position. Select “A. CAL” in the amplifier menus. For details on adjusting the parameters, see “Using the setting menu” (page 71) and “Overview of the menus” (page 72).

■ START

■ CAL TYPE*
Lets you select the Auto Calibration type for each seating position. For details, see step 4 of “3: Confirming/saving the measurement results” (page 36).

* You can select this parameter only when you have performed the Auto Calibration and saved the settings.

■ POSITION
You can register three patterns as position 1, 2, 3, depending on the seating positions, listening environment, and measurement conditions. If you do not select the position number, the Auto Calibration result will automatically save as POS 1 (initial setting).

To register more than one set of settings for the listening environment
You can select the seating position you want and register the measurement results of the Auto Calibration for that seating position.

1 Press AMP MENU.
2 Press ▲/▼ repeatedly to select “A. CAL”, then press + or ●.
3 Press ▲/▼ repeatedly to select “POSITION”, then press + or ●.
4 Press ▲/▼ repeatedly to select the position (POS 1, 2, 3) for which you want to register the measurement results, then press +.
5 Press ▲/▼ repeatedly to select “START”, then press + to perform Auto Calibration.
For details, see “2: Performing Auto Calibration” (page 35).
The measurement results is registered as the position you selected in step 4.
6 Repeat steps 1 to 5 to register another seating position.

To select the registered seating position
1 Press AMP MENU.
2 Press ▲/▼ repeatedly to select “A. CAL”, then press + or ●.
3 Press ▲/▼ repeatedly to select “POSITION”, then press + or ●.
4 Press ▲/▼ repeatedly to select position (POS 1, 2, 3) you want, then press +. The registered seating position is selected.

To exit the menu
Press AMP MENU.

■ NAME IN (Naming position)
You can rename the position name.

1 Select the position (POS 1, 2, 3) for which you want to name.
2 Press ▲/▼ repeatedly to select “NAME IN”, then press + or ●. The cursor flashes and you can select a character.
3 Press ▲/▼ to select a character, then press ◄/► to move the cursor to the next position.

If you made a mistake
Press ◄/► until the character you want to change flashes, then press ▲/▼ to select the correct character.

continued
Tips
- You can select the character type as follows by pressing "V"/
  Alphabet (upper case) → Numbers →
  Symbols
- To enter a blank space, press ▼ without selecting a character.

4 Press +.
The name you entered is registered.

---

Adjusting the speaker levels
(TEST TONE)

You can adjust the speaker levels while listening to the test tone from your listening position.

1 Press AMP MENU.
2 Press "V"/ repeatedly to select “LEVEL”, then press + or ▼.
3 Press "V"/ repeatedly to select “T. TONE”, then press +. 
4 Press ‡/§ repeatedly to select "AUTO ■■■*”.
   The test tone is output from each speaker in sequence.
* ■■■ represent a speaker channel.

Note
Depending on the speaker pattern settings, test tone may not be output from all speakers even though you select “AUTO ■■■”.

5 Adjust the speaker levels using the LEVEL menu so that the level of the test tone sounds the same from each speaker.
For details, see LEVEL menu (page 76).

Tips
- To adjust the level of all speakers at the same time, press MASTER VOL +/- (RM-AAU073 only) or ± (RM-AAU075 only). You can also use MASTER VOLUME on the receiver.
- The adjusted value are shown on the display during adjustment.

6 Repeat steps 1 to 4 to select “OFF”.
   You can also press any input buttons. The test tone turns off.

When a test tone is not output from the speakers
- The speaker cords may not be connected securely.
- The speaker cords may have the short-circuit problem.

When a test tone is output from a different speaker than the speaker indicator showed in the display
The speaker pattern to the connected speaker is not set up correctly. Make sure the speaker connection and the speaker pattern match.

Note
Test tone is not output from the headphones connected to the S-AIR surround amplifier.
4 Play back the source.

5 Press MASTER VOL +/- (RM-AAU073 only) or +/− (RM-AAU075 only) to adjust the volume.
   You can also use MASTER VOLUME on the receiver.

6 Press SOUND FIELD +/- to enjoy the surround sound.
   You can also use 2CH/A.DIRECT, A.F.D., MOVIE or MUSIC on the receiver.
   For details, see page 50.

To activate the muting function
Press MUTING (RM-AAU073 only) or (RM-AAU075 only) on the remote.
The muting function will be canceled when you do the following.
• Press MUTING (RM-AAU073 only) or (RM-AAU075 only) again.
• Increase the volume.
• Turn off the receiver.
• Perform Auto Calibration

To avoid damaging your speakers
Before you turn off the receiver, be sure to turn down the volume level.

1 Turn on the connected component.

2 Turn on the receiver.

3 Press one of the input buttons to select the component you want.
   You can also use INPUT SELECTOR on the receiver.
   The selected input appears on the display.
**Basic Operations**

**Naming inputs**

You can enter a name of up to 8 characters for inputs (except TUNER) and display it on the receiver’s display. This is convenient for labeling the jacks with the names of the connected components.

1. **Press one of the input buttons to select the input you want to create an index name for.**
   You can also use INPUT SELECTOR on the receiver.

2. **Press AMP MENU.**

3. **Press †/‖ repeatedly to select “SYSTEM”, then press ‡ or †.**

4. **Press †/‖ repeatedly to select “NAME IN”, then press ‡ or †.**
   The cursor flashes and you can select a character.

5. **Press †/‖ to select a character, then press †/‖ to move the cursor to the next position.**
   
   **If you made a mistake**
   Press †/‖ until the character you want to change flashes, then press †/‖ to select the correct character.

   **Tips**
   • You can select the character type as follows by pressing †/‖.
     Alphabet (upper case) → Numbers → Symbols
   • To enter a blank space, press † without selecting a character.

6. **Press ‡.**
   The name you entered is registered.

---

**Viewing information on the display**

You can check the sound field, etc., by changing the information on the display.

- Press DISPLAY repeatedly.
  Each time you press the button, the display changes cyclically as follows:

  **All inputs except the FM and AM band**
  Index name of the input → Selected input → Sound field currently applied → Volume level → Stream info

  **FM and AM band**
  Program Service name → Frequency → Program Type indication → Radio Text indication → Current Time indication (in 24-hour system mode) → Sound field currently applied → Volume level

  a) Index name appears only when you have assigned one to the input or preset station (page 43, 48).
  Index name does not appear when only blank spaces have been entered, or it is the same as the input name.
  b) During RDS reception only (Models of area code AU1, TW2 only) (page 49).

**Note**
Character or marks may not be displayed for some languages.
Using the Sleep Timer

You can set the receiver to turn off automatically at a specified time.

1 Press AMP MENU.
2 Press ▲/▼ repeatedly to select “SYSTEM”, then press □ or ▼.
3 Press ▲/▼ repeatedly to select “SLEEP”, then press □ or ▼.
4 Press ▲/▼ repeatedly to select the preset time you want, then press □.

The display changes as follows:
OFF ↔ 0-30-00 ↔ 1-00-00 ↔
1-30-00 ↔ 2-00-00

When sleep timer is being used, “SLEEP” indicator lights up in the display.

Tips
• To check the remaining time before the receiver turns off, repeat steps 1 to 3. The remaining time appears on the display.
• A count down is displayed 1 minute before the receiver turns off.

Recording

You can record from a video/audio component using the receiver. Refer to the operating instructions supplied with your recording component.

Recording onto a CD-R

You can record onto a CD-R using the receiver. Refer to the operating instructions supplied with your CD recorder.

1 Press one of the input buttons to select the playback component.
   You can also use INPUT SELECTOR on the receiver.
2 Prepare the playback component for playing.
   For example, tune to the radio station you want to record (page 45).
3 Prepare the recording component.
   Insert a blank CD-R into the CD recorder and adjust the recording level.
4 Start recording on the recording component, then start playback on the playback component.

Note
Sound adjustments do not affect the signal output from the SA-CD/CD/CD-R AUDIO OUT jacks.
**Recording onto a recording media**

1. **Press one of the input buttons to select the playback component.**
   You can also use INPUT SELECTOR on the receiver.

2. **Prepare the playback component for playing.**
   For example, insert the video tape you want to copy into the VCR.

3. **Prepare the recording component.**
   Insert a blank video tape, etc. into the recording component (VIDEO 1) for recording.

4. **Start recording on the recording component, then start playback on the playback component.**

**Notes**

- Some sources contain copy guards to prevent recording. In this case, you may not be able to record from the source.
- Only analog signals are output from the analog output jack (for recording).
- HDMI sound cannot be recorded.

**Listening to FM/AM radio**

You can listen to FM and AM broadcasts through the built-in tuner. Before operation, make sure you have connected the FM and AM antennas (aerials) to the receiver (page 31).

**Tip**

The tuning scale for direct tuning differs depending on the area code as shown in the following table. For details on area codes, see page 4.

<table>
<thead>
<tr>
<th>Area code</th>
<th>FM</th>
<th>AM</th>
</tr>
</thead>
<tbody>
<tr>
<td>U2, CA2</td>
<td>100 kHz</td>
<td>10 kHz*</td>
</tr>
<tr>
<td>AU1, TW2</td>
<td>50 kHz</td>
<td>9 kHz</td>
</tr>
</tbody>
</table>

* The AM tuning scale can be changed (page 47).
Tuning into a station automatically (Automatic Tuning)

1. Press TUNER repeatedly to select the FM or AM band.

2. Press TUNING + or TUNING –.
   - Press TUNING + to scan from low to high; press TUNING – to scan from high to low.
   - The receiver stops scanning whenever a station is received.

Using the controls on the receiver

1. Turn INPUT SELECTOR to select the FM or AM band.
2. Press TUNING MODE repeatedly to select “AUTO”.
3. Press TUNING + or TUNING –.

In case of poor FM stereo reception
If the FM stereo reception is poor and “ST” flashes on the display, select monaural audio so that the sound will be less distorted.

1. Press AMP MENU.
2. Press ‡/§ repeatedly to select “TUNER”, then press + or §.
3. Press ‡/§ repeatedly to select “FM MODE”, then press + or §.
4. Press ‡/§ repeatedly to select “MONO”, then press +.

To return to stereo mode, repeat steps 1 to 4 and select “STEREO” in step 4.

Tuning into a station directly (Direct Tuning)

You can enter the frequency of a station directly by using the numeric buttons.

1. Press TUNER repeatedly to select the FM or AM band.
   - You can also use INPUT SELECTOR on the receiver.

2. Press D.TUNING.

3. Press and hold SHIFT, then press the numeric buttons to enter the frequency.
   - Example 1: FM 102.50 MHz
     - Models of area code U2 and CA2: Select 1 ✦ 0 ✦ 2 ✦ 5
     - Models of area code AU1 and TW2: Select 1 ✦ 0 ✦ 2 ✦ 5 ✦ 0
   - Example 2: AM 1,350 kHz
     - Select 1 ✦ 3 ✦ 5 ✦ 0

4. Press and hold SHIFT, then press ENTER.
   - You can also use MEMORY/ENTER on the receiver.

Tip
If you have tuned in an AM station, adjust the direction of the AM loop antenna (aerial) for optimum reception.

If you cannot tune in a station
Make sure you have entered the right frequency. If not, repeat steps 2 to 4. If you still cannot tune in a station, the frequency is not used in your area.
Changing the AM tuning scale
(Models of area code U2, CA2 only)

You can change the AM tuning scale to either 9 kHz or 10 kHz using the buttons on the receiver.

1 Press $I/\bigcirc$ to turn off the receiver.

2 While holding down TUNING MODE, press $I/\bigcirc$.

3 Change the current AM tuning scale to 9 kHz (or 10 kHz).
   To reset the scale to 10 kHz (or 9 kHz), repeat the procedure above.

Note
All preset stations will be erased when you change the tuning scale.

Presetting FM/AM radio stations

You can preset up to 30 FM stations and 30 AM stations. Then you can easily tune in the stations you often listen to.

1 Press TUNER repeatedly to select the FM or AM band.
   You can also use INPUT SELECTOR on the receiver.
2 Tune in the station that you want to preset using Automatic Tuning (page 46) or Direct Tuning (page 46).
Switch the FM reception mode, if necessary (page 46).

3 Press MEMORY.
You can also use MEMORY/ENTER on the receiver.

4 Press and hold SHIFT, then press the numeric buttons to select a preset number.
You can also press PRESET + or PRESET – to select a preset number.

5 Press and hold SHIFT, then press ENTER.
You can also use MEMORY/ENTER on the receiver.
The station is stored as the selected preset number.

6 Repeat steps 1 to 5 to preset another station.

---

### Tuning to preset stations

1 Press TUNER repeatedly to select the FM or AM band.

2 Press PRESET + or PRESET – repeatedly to select the preset station you want.
Each time you press the button, you can select a preset station as follows:

![Preset Station Selection Diagram]

You can also press and hold SHIFT and then press the numeric buttons to select the preset station you want. To enter the selection, press and hold SHIFT then press ENTER.

### Using the controls on the receiver

1 Turn INPUT SELECTOR to select the FM or AM band.
2 Press TUNING MODE repeatedly to select “PRESET”.
3 Press TUNING + or TUNING – to select the preset station you want.

### Naming preset stations

1 Press TUNER repeatedly to select the FM or AM band.
You can also use INPUT SELECTOR on the receiver.

2 Tune in the preset station you want to create an index name for (page 48).

3 Press AMP MENU.

4 Press ▲/▼ repeatedly to select “TUNER”, then press ✖️ or ✔️.
5 Press †/‡ repeatedly to select “NAME IN”, then press ▲ or ◄. The cursor flashes and you can select a character.

6 Press †/‡ to select a character, then press ◄/► to move the cursor to the next position.

If you made a mistake
Press ◄/► until the character you want to change flashes, then press †/‡ to select the correct character.

Tips
• You can select the character type as follows by pressing †/‡.
  Alphabet (upper case) → Numbers → Symbols
• To enter a blank space, press ◄ without selecting a character.

7 Press •. The name you entered is registered.

Note (Models of area code AU1, TW2 only)
When you name an RDS station and tune in that station, the Program Service name appears instead of the name you entered. (You cannot change the Program Service name. The name you entered will be overwritten by the Program Service name.)

Using the Radio Data System (RDS)

(Models of area code AU1, TW2 only)
This receiver allows you to use Radio Data System (RDS), which enables radio stations to send additional information along with the regular program signal. This receiver offers convenient RDS features, such as program service name display.

Notes
• RDS is operable only for FM stations.
• Not all FM stations provide RDS service, nor do they provide the same type of services. If you are not familiar with the RDS services in your area, check with your local radio stations for details.

Receiving RDS broadcasts

Simply select a station on the FM band using Direct Tuning (page 46), Automatic Tuning (page 46), or Preset Tuning (page 48).

When you tune in a station that provides RDS services, “RDS” lights up and the program service name appears on the display.

Note
RDS may not work properly if the station you tuned to is not transmitting the RDS signal properly or if the signal strength is weak.

Tip
When a program service name is displayed, you can check the frequency by pressing DISPLAY repeatedly (page 43).
Selecting the sound field

This receiver can create multi channel surround sound. You can select one of the optimized sound fields from the receiver’s preprogrammed sound fields.

Press SOUND FIELD +/- repeatedly to select the sound field you want. You can also press 2CH/A.DIRECT, A.F.D., MOVIE or MUSIC on the receiver.

2 channel sound mode

You can switch the output sound to 2 channel sound regardless of the recording formats of the software you are using, the playback component connected, or the sound field settings of the receiver.

- **2CH ST. (2 Channel Stereo)**
  The receiver outputs the sound from the front left/right speakers only. There is no sound from the subwoofer. Standard 2 channel stereo sources completely bypass the sound field processing and multi channel surround formats are downmixed to 2 channel except LFE signal.

- **A. DIRECT (Analog Direct)**
  You can switch the audio of the selected input to 2 channel analog input. This function enables you to enjoy high quality analog sources without any adjustment. When using this function, only the volume and front speaker level can be adjusted.

Notes

- When headphones are connected, “HP DIR” appears on the display.
- You cannot select Analog Direct when you select DVD, DMPORT and HDMI 1-3 as input.

Auto Format Direct (A.F.D.) mode

The Auto Format Direct (A.F.D.) mode allows you to listen to high fidelity sound and select the decoding mode for listening to a 2 channel stereo sound as multi channel sound.

- **A.F.D. AUTO (A.F.D. Auto)**
  Presets the sound as it was recorded/encoded without adding any surround effects.

- **MULTI ST. (Multi Stereo)**
  Outputs 2 channel left/right signals from all speakers. However, sound may not be output from certain speakers depending on the speaker settings.

Movie mode

You can take advantage of surround sound simply by selecting one of the receiver’s preprogrammed sound fields. They bring the exciting and powerful sound of movie theaters into your home.

- **C.ST.EX A (Cinema Studio EX A DCS)**
  Reproduces the sound characteristics of the Sony Pictures Entertainment “Cary Grant Theater” cinema production studio. This is a standard mode, great for watching almost any type of movie.

- **C.ST.EX B (Cinema Studio EX B DCS)**
  Reproduces the sound characteristics of the Sony Pictures Entertainment “Kim Novak Theater” cinema production studio. This mode is ideal for watching science-fiction or action movies with lots of sound effects.
Enjoying Surround Sound

- **C.ST.EX C (Cinema Studio EX C DCS)**
  Reproduces the sound characteristics of the Sony Pictures Entertainment scoring stage. This mode is ideal for watching musicals or films where orchestra music is featured in the soundtrack.

- **V. M. DIM (V. Multi Dimension DCS)**
  Creates many virtual speakers from a single pair of actual surround speakers.

- **PLII MV (Pro Logic II Movie)**
  Performs Dolby Pro Logic II Movie mode decoding. This setting is ideal for movies encoded in Dolby Surround. In addition, this mode can reproduce sound in 5.1 channel for watching videos of overdubbed or old movies.

- **PLIIX MV (Pro Logic IIx Movie)**
  Performs Dolby Pro Logic IIx Movie mode decoding. This setting expands Dolby Pro Logic II Movie or Dolby Digital 5.1 to discrete 7.1 movie channels.

- **PLIIZ (Pro Logic IIz)**
  Performs Dolby Pro Logic IIz mode decoding. This setting increases flexibility to expand a 5.1 to a 7.1 channel system. Its vertical component gives a dimension of presence and depth.

- **NEO6 CIN (Neo:6 Cinema)**
  Performs DTS Neo:6 Cinema mode decoding. A source recorded in 2 channel format is decoded into 7 channels.

**Music mode**

You can take advantage of surround sound simply by selecting one of the receiver’s preprogrammed sound fields. They bring the exciting and powerful sound of concert halls into your home.

- **HALL (Hall)**
  Reproduces the acoustics of a classical concert hall.

- **JAZZ (Jazz Club)**
  Reproduces the acoustics of a jazz club.

- **CONCERT (Concert)**
  Reproduces the acoustics of a 300-seat live house.

- **STADIUM (Stadium)**
  Reproduces the feeling of a large open-air stadium.

- **SPORTS (Sports)**
  Reproduces the feeling of sports broadcasting.

- **PORTABLE (Portable Audio Enhancer)**
  Reproduces a clear enhanced sound image from your portable audio device. This mode is ideal for MP3 and other compressed music.

- **PLII MS (Pro Logic II Music)**
  Performs Dolby Pro Logic II Music mode decoding. This setting is ideal for normal stereo sources such as CDs.

- **PLIIX MS (Pro Logic IIx Music)**
  Performs Dolby Pro Logic IIx Music mode decoding. This setting is ideal for normal stereo sources such as CDs.

- **NEO6 MUS (Neo:6 Music)**
  Performs DTS Neo:6 Music mode decoding. A source recorded in 2 channel format is decoded into 7 channels. This setting is ideal for normal stereo sources such as CDs.
When headpones are connected

You can only select this sound field if the headphones are connected to the receiver.

**HP 2CH (Headphones 2CH)**
This mode is selected automatically if you use headphones (except Analog Direct). Standard 2 channel stereo sources completely bypass the sound field processing and multi channel surround formats are downmixed to 2 channels except LFE signals.

**Note**
When headphones are connected to the S-AIR surround amplifier, the sound field is automatically set to “HP 2CH”.

**HP DIR (Headphones Direct)**
Outputs the analog signals without processing by the equalizer, sound field, etc.

If you connect a subwoofer
This receiver will generate a low frequency signal for output to the subwoofer when there is no LFE signal, which is a low-pass sound effect output from a subwoofer to a 2 channel signal. However, the low frequency signal is not generated for “NEO6 CIN” or “NEO6 MUS” when all speakers are set to “LARGE”. In order to take full advantage of the Dolby Digital bass redirection circuitry, we recommend setting the subwoofer’s cut off frequency as high as possible.

Notes on sound fields
- Depends on the speaker pattern settings, some sound fields may not be available.
- The sound fields for music and movie do not work in the following cases.
  - signals with a sampling frequency of more than 48 kHz are being received.
  - signals with more than 5.1 channel are being received (except PLIIZ).
- You cannot select PLII, PLIIx and PLIIZ at the same time.
  - PLIIx is available only when the speaker pattern is set to a setting with surround back speaker(s).
  - PLIIZ is available only when the speaker pattern is set to a setting with front high speakers.
- The effects provided by the virtual speakers may cause increased noise in the playback signal.
- When listening with sound fields that employ the virtual speakers, you will not be able to hear any sound coming directly from the surround speakers.
- When one of the sound fields for music is selected, no sound is output from the subwoofer if all the speakers are set to “LARGE” in the SPEAKER menu. However, the sound will be output from the subwoofer if the digital input signal contains LFE signals, or if the front or surround speakers are set to “SMALL”, the sound field for movie is selected, or “PORTABLE” is selected.

Tips
- You can identify the encoding format of DVD software, etc., by looking at the logo on the package.
- Dolby Pro Logic IIx and Dolby Pro Logic IIz decoding are effective when multi channel signals are input.
- Sound fields with DCS marks use DCS technology. For details on Digital Cinema Sound (DCS), see “Glossary” (page 85).

To turn off the surround effect for movie/music
Press SOUND FIELD +/- repeatedly to select “2CH ST.” or “A.F.D. AUTO”.
You can also press 2CH/A.DIRECT repeatedly on the receiver to select “2CH ST.” or press A.F.D. repeatedly on the receiver to select “A.F.D. AUTO”.

52/68
When connecting Blu-ray disc players and other next generation HD players

Digital audio formats that this receiver can decode depend on digital audio input jacks for the connected component. This receiver supports the following audio formats.

<table>
<thead>
<tr>
<th>Audio format</th>
<th>Maximum number of channels</th>
<th>Connection of the playback component and the receiver</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>COAXIAL/OPTICAL</td>

</tbody>
</table>

a) Audio signals are output in another format if the playback component does not correspond to the format. For details, refer to the operating instructions of the playback component.
b) Signals with a sampling frequency of more than 96 kHz are played back at 96 kHz or 88.2 kHz.
Enjoying the surround effect at low volume levels
(NIGHT MODE)

This function allows you to retain a theater like environment at low volume levels. This function can be used with other sound fields. When watching a movie late at night, you will be able to hear the dialog clearly even at a low volume level.

1 Press AMP MENU.
2 Press ✂️/ Cupertino repeatedly to select “AUDIO”, then press ⬆️ or ⬇️.
3 Press ✂️/ Cupertino repeatedly to select “NIGHT M.”, then press ⬆️ or ⬇️.
4 Press ✂️/ Cupertino repeatedly to select “NIGHT. ON”, then press ⬆️.

Note
This function does not work in the following cases.
– Signals with a sampling frequency of more than 48 kHz are being received.
– Analog Direct is selected.

Tip
While the NIGHT MODE is turned on, “D. RANGE” is automatically set to “COMP. MAX”.

Resetting sound fields to the initial settings

Be sure to use the buttons on the receiver for this operation.

1 Press I/ ✿ to turn off the receiver.
2 While holding down MUSIC, press I/ ✿.
   “S.F. CLEAR” appears on the display and all sound fields are reset to their initial setting.
What is “BRAVIA” Sync?

“BRAVIA” Sync is compatible with Sony TV, Blu-ray Disc/DVD player, AV amplifier, etc., that is equipped with the Control for HDMI function. By connecting Sony components that are compatible with the “BRAVIA” Sync with an HDMI cable (not supplied), operation is simplified as follows:

- One-Touch Play (page 56)
- System Audio Control (page 57)
- System Power Off (page 58)
- Theater/Theatre Mode Sync (page 59)
- Audio Return Channel (page 59)

Control for HDMI is a mutual control function standard used by HDMI CEC (Consumer Electronics Control) for HDMI (High-Definition Multimedia Interface).

We recommend that you connect the receiver to products featuring “BRAVIA” Sync.

Note
Depending on the connected component, the Control for HDMI function may not work. Refer to the operating instructions of the component.

Preparing for the “BRAVIA” Sync

The receiver is compatible with the “Control for HDMI-Easy Setting” function.

- If your TV is compatible with the “Control for HDMI-Easy Setting” function, you can set the receiver and playback components Control for HDMI function automatically by setting the TV (page 55).
- If your TV is not compatible with the “Control for HDMI-Easy Setting” function, set the Control for HDMI function of the receiver, playback components and TV individually (page 56).

If your TV is compatible with the “Control for HDMI-Easy Setting” function

The Control for HDMI function of the receiver can be turned on simultaneously by turning on the Control for HDMI function of the TV.

1 Connect the receiver, TV and playback components via HDMI connection (page 24). (The respective components must be compatible with the Control for HDMI function.)

2 Turn on the receiver, TV and playback components.

3 Turn on the Control for HDMI function of the TV. The Control for HDMI function of the receiver and all the connected components are turned on simultaneously. When the setup is completed, “COMPLETE” will appear.

For details on setting the TV, refer to the operating instructions supplied with the TV.
If your TV is not compatible with the “Control for HDMI-Easy Setting” function

1 Perform the steps given in “If your TV is compatible with the “Control for HDMI-Easy Setting” function” (page 55).

2 Press AMP MENU.

3 Press \+/-> repeatedly to select “HDMI”, then press + or -.

4 Press \+/-> repeatedly to select “CTRL.HDMI”, then press + or -.

5 Press \+/-> repeatedly to select “CTRL.ON”, then press +.
   Control for HDMI function is activated.

6 Set the Control for HDMI function for the connected component to on.
   If the Control for HDMI function for the connected component is already set to on, you do not need to change the setting.

For details on setting the TV and connected components, refer to the operating instructions of the respective components.

Notes
• Before you do the “Control for HDMI-Easy Setting” from the TV, be sure to turn on the TV, connected components and receiver.
• If the playback components cannot function after you have made the settings for “Control for HDMI-Easy Setting”, check the Control for HDMI setting on your TV.
• If the connected components do not support “Control for HDMI-Easy Setting”, you need to set the Control for HDMI function for the connected components to on before you perform the “Control for HDMI-Easy Setting” from the TV.

Playing back components with one-touch operation
(One-Touch Play)

By a simple operation (one-touch), components connected to the receiver with HDMI connections start automatically. You can enjoy the sound/image from connected components.

When you set “PASS.THRU” to “AUTO” or “ON”, sound and image can be output only from the TV while the receiver remains in standby mode.

When you start playback a connected component, the receiver and TV operation are simplified as follow:

Receiver and TV

<table>
<thead>
<tr>
<th>Turns on (if in standby mode)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Switches to appropriate HDMI input</td>
</tr>
</tbody>
</table>

Notes
• Depending on the TV, the start of the content may not be output.
• Depending on the settings, the receiver may not turns on when “PASS.THRU” is set to “AUTO” or “ON”.

Tip
You can also select a connected component, such as DVD/Blu-ray disc player using the TV menu. The receiver and TV will automatically switch to the appropriate HDMI input.
Enjoying the TV sound from the speakers connected to the receiver
(System Audio Control)

You can enjoy the TV sound from the speakers connected to the receiver by a simple operation.
You can operate System Audio Control function using the TV menu. For details, refer to the operating instructions of the TV.

### TV
- **Sets System Audio Control to on**

### Receiver
- **Turns on (if in standby mode)**
- **Switches to appropriate HDMI input**
- **Outputs TV sound**
- **Minimizes TV volume**

You can also use the System Audio Control function as follows.
- If you turn on the receiver while the TV is turned on, the System Audio Control function will automatically be set to on and the TV sound will output from the speakers connected to the receiver. However, if you turn off the receiver, the sound will output from the TV speakers.
- When you adjust the TV volume, the receiver’s volume is adjusted simultaneously.

### Notes
- If System Audio Control does not function according to your TV setting, refer to the operating instructions of the TV.
- When “CTRL.HDMI” is set to “CTRL ON”, the “AUDIO.OUT” settings in the HDMI menu will set automatically depending on the System Audio Control settings.
- When you connect a TV that does not have System Audio Control function, the System Audio Control function does not work.
- If the TV is turned on before turning on the receiver, the TV sound will not be output for a moment.
Turning off the receiver with the TV
(System Power Off)

When you turn the TV off by using the POWER button on the TV’s remote, the receiver and the connected components turn off automatically.
You can also use the receiver’s remote to turn off the TV.

Press and hold TV, then press TV I/\(\). The TV, receiver and the components connected via HDMI are turned off.

Notes
• Set the TV Standby Synchro to on before using the System Power Off function. For details, refer to the operating instructions of the TV.
• Depending on the status, the connected components may not be turned off. For details, refer to the operating instructions of the connected components.
Enjoying movies with the optimum sound field
(Theater/Theatre Mode Sync)

Press the THEATER or THEATRE button on the remote of the receiver, TV, or the Blu-ray disc player, while pointing the remote toward the TV.

The sound field switches to “C.ST.EX B”. To return to the previous sound field, press the THEATER or THEATRE button again.

**Note**
The sound field may not switch depending on the TV.

**Tip**
The sound field may be changed back to the previous one when you change the TV’s input.

---

Enjoying the TV sound via an HDMI cable
(Audio Return Channel)

The Audio Return Channel (ARC) function enables the TV outputs the audio signals to the receiver via an HDMI cable connected to the HDMI TV OUT jack.

You can enjoy the TV sound from the speakers connected to the receiver without connecting the TV OPTICAL IN or TV AUDIO IN jack.

1. Press AMP MENU.
2. Press ‡/¥ repeatedly to select “HDMI”, then press ± or †.
3. Press ‡/¥ repeatedly to select “ARC”, then press ± or †.
4. Press ‡/¥ repeatedly to select “ARC ON”, then press ±.

**Notes**
- This function does not work when you set “CTRL.HDMI” to “CTRL OFF” in the HDMI menu.
- This function is only available when
  - your TV is compatible with Audio Return Channel (ARC) function.
  - INPUT MODE is set to “AUTO”.
This receiver is compatible with the S-AIR function (page 88), which allows wireless sound transmission between S-AIR products. There are two types of S-AIR product.

- **S-AIR main unit (this receiver):**
  This is for transmitting sound.
  You can use up to three S-AIR main units.
  (The number of usable S-AIR main unit depends on the use environment.)

- **S-AIR sub unit (not supplied):**
  This is for receiving sound.
  - Surround amplifier: You can enjoy surround and surround back speakers sound wirelessly.
  - S-AIR receiver: You can enjoy system sound in another room.

The S-AIR products can be purchased as an option (the S-AIR products lineup differs depending on the area).

Notes or instructions for the surround amplifier or S-AIR receiver in this operating instructions is refer only when the surround amplifier or S-AIR receiver is used.

**Notes**
- The S-AIR menu and parameters only available when you have inserted the wireless transmitter.
- When speaker pattern is set to a setting with front high speakers, the surround back speakers sound is not output from surround amplifier even if the surround amplifier is connected.

**About environments where S-AIR products (S-AIR main unit and sub unit) are used**

S-AIR products use a radio frequency of 2.4 GHz. Certain electronic equipment or other factors may cause lost connection or instability in S-AIR reception.

- **Electronic equipment influence**
  The following may cause interference or cross talk.
  - Cellular phones, cordless phones
  - Wireless LAN, personal computers
  - Game machines using radio signals
  - Microwave ovens
• Other factors
  The following may cause poor reception.
  – Materials or structures, such as walls and floors
  – The location where an S-AIR product is placed
When using S-AIR products, place them as far as possible from the above electronic equipment, or place where S-AIR reception is stable.

Setting up an S-AIR product

Before using an S-AIR product, be sure to perform the following settings to establish the sound transmission.
• Inserting the wireless transmitter/transceiver (page 31).
• Establishing sound transmission between the S-AIR main unit and S-AIR sub unit (ID setting) (page 61).
• Pairing the S-AIR main unit with a specific S-AIR sub unit (Pairing operation) (page 62).

Establishing sound transmission between the S-AIR main unit and S-AIR sub unit (ID setting)

When you match the ID of the S-AIR main unit and the S-AIR sub unit, you can establish sound transmission. You can use multiple S-AIR main unit by setting a different ID for each unit.

To set the ID of the S-AIR main unit

1 Press AMP MENU.
2 Press †/‡ repeatedly to select “S-AIR”, then press + or –.
3 Press †/‡ repeatedly to select “ID SETUP”, then press + or –.
4 Press †/‡ repeatedly to select the ID (A, B or C) you want, then press +.

To exit the menu
Press AMP MENU.

continued
To set the ID of the S-AIR sub unit
Be sure to match the ID on S-AIR sub unit you want to the S-AIR main unit.
For details on setting the ID of the surround amplifier and S-AIR receiver, refer to the operating instructions supplied with the surround amplifier and S-AIR receiver.

Sound transmission is established as follows (example):

![Diagram showing sound transmission between S-AIR main unit and sub units]

Notes
- Sources with copyright protection may not be playable on S-AIR sub unit.
- If you have connected surround amplifier, surround sound will not be output from S-AIR main unit.

Pairing the S-AIR main unit with a specific S-AIR sub unit (Pairing operation)
To establish sound transmission, you need to set the same ID for your S-AIR main unit and S-AIR sub unit.
However, if your neighbors have S-AIR products and their IDs are the same as yours, your neighbors could receive the sound of your S-AIR main unit or vice versa.
To prevent this, you can pair the S-AIR main unit with a specific S-AIR sub unit by performing the pairing operation.

Before pairing
Sound transmission is established by the ID (example).

After pairing
Sound transmission is established between the paired S-AIR main unit and S-AIR sub unit(s) only.
To perform pairing

1 Place the S-AIR sub unit that you want to pair near the S-AIR main unit.

2 Match the IDs of the S-AIR main unit and the S-AIR sub unit.
   • To set the ID of the S-AIR main unit, see “To set the ID of the S-AIR main unit” (page 61).
   • To set the ID of the S-AIR sub unit, refer to the operating instructions supplied with the S-AIR sub unit.

3 Press AMP MENU.

4 Press †/‡ repeatedly to select “S-AIR”, then press  or ➡.

5 Press †/‡ repeatedly to select “PAIRING”, then press  or ➡.

6 Press †/‡ repeatedly to select the setting you want, then press  .
   • START: The S-AIR main unit starts pairing. “SEARCH” flashes on the display.
   • STATUS: You can check the current ID. When the pairing setting is not made, “NO PAIR” appears on the display.

7 Start pairing of the S-AIR sub unit.

   ■ For the surround amplifier
   Refer to the operating instructions supplied with the surround amplifier.

   ■ For the S-AIR receiver
   Refer to the operating instructions supplied with the S-AIR receiver.

8 Pairing completed.
   “COMPLETE” appears on the display.

To exit the menu
Press AMP MENU.

Note
Perform the pairing within several minutes after step 6. Otherwise, the pairing is canceled automatically and “ERROR” appears on the display.

To cancel pairing
Reset the ID of the S-AIR main unit.
For details, see “To set the ID of the S-AIR main unit” (page 61). You can select the same ID as before.
Enjoying the system’s sound in another room

(For the S-AIR receiver only (not supplied))

You can enjoy the system’s sound in another room by using the S-AIR receiver. The S-AIR receiver can be placed in another room for enjoying the system’s sound there. For details of the S-AIR receiver, refer to the operating instructions supplied with the S-AIR receiver.

1 Set the ID of the S-AIR receiver to match the ID of the S-AIR main unit.

- To set the ID of the S-AIR main unit, see “To set the ID of the S-AIR main unit” (page 61).
- To set the ID of the S-AIR receiver, refer to the operating instructions supplied with the S-AIR receiver.

Notes

- When you are using another S-AIR sub unit, such as a surround amplifier, do not change the ID of the S-AIR main unit. Set the ID of the S-AIR receiver to match the ID of the S-AIR main unit.
- When you pair the S-AIR main unit and another S-AIR sub unit, such as a surround amplifier, you also need to pair the S-AIR main unit and the S-AIR receiver. For details, see “Pairing the S-AIR main unit with a specific S-AIR sub unit (Pairing operation)” (page 62).

2 Press AMP MENU.

3 Press †/‡ repeatedly to select “S-AIR”, then press ‡ or †.

4 Press †/‡ repeatedly to select “MODE”, then press ‡ or †.

5 Press †/‡ repeatedly to select the setting you want.

- PARTY: The S-AIR receiver outputs sound according to the input selected on the S-AIR main unit.
- SEPARATE: You can select the input you want for the S-AIR receiver while the input of the S-AIR main unit remain unchanged. When at SEPARATE mode, you can only select “SA-CD/CD”, “DMPORT”, “FM TUNER”, “AM TUNER” and the input that is currently selected at the S-AIR main unit.

Note

When “FM TUNER” or “AM TUNER” is selected on the S-AIR main unit, you can only select the same band for the tuner on the S-AIR receiver. However, you can select input other than TUNER on the S-AIR receiver.

6 Adjust the volume on the S-AIR receiver.

Notes

- The sound of the S-AIR receiver may be cut off by operation of the S-AIR main unit.
- When the sound is other than 2 channel stereo, multi channel sound is downmixed to 2 channel.
- Signals with a sampling frequency of more than 96 kHz cannot output to this S-AIR receiver.

To control the system from the S-AIR receiver

You can control the system from the S-AIR receiver by using the following buttons.

<table>
<thead>
<tr>
<th>Press</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>◀, ▶, ■</td>
<td>Share the same operations on the remote.</td>
</tr>
<tr>
<td>S-AIR CH</td>
<td>Change the function of the system.</td>
</tr>
</tbody>
</table>

For details, refer to the operating instructions of the S-AIR receiver.
Changing the channel for better sound transmission

If you use multiple wireless systems which sharing the 2.4 GHz band, such as wireless LAN or Bluetooth, the transmission of S-AIR products or other wireless systems may be unstable. In this case, the transmission may be improved by changing the following “RF SETUP” setting.

1. Press AMP MENU.
2. Press \( \uparrow / \downarrow \) repeatedly to select “S-AIR”, then press \( \ominus \) or \( \oplus \).
3. Press \( \uparrow / \downarrow \) repeatedly to select “RF SETUP”, then press \( \ominus \) or \( \oplus \).
4. Press \( \uparrow / \downarrow \) repeatedly to select the setting you want, then press \( \ominus \).
   - RF AUTO: Normally select this. The system changes “RF SETUP” to “RF ON” or “RF OFF” automatically.
   - RF ON: The system transmits sound by searching the better channel for transmitting.
   - RF OFF: The system transmits sound by fixing the channel for transmitting.

To exit the menu
Press AMP MENU.

Notes
- In most cases, you will not need to change this setting.
- If “RF SETUP” is set to “RF OFF”, transmission between the S-AIR main unit and S-AIR sub unit can be performed using one of the following channels.
  - S-AIR ID A: equivalent channel for IEEE 802.11b/g channel 1
  - S-AIR ID B: equivalent channel for IEEE 802.11b/g channel 6
  - S-AIR ID C: equivalent channel for IEEE 802.11b/g channel 11
- The transmission may be improved by changing the transmission channel (frequency) of the other wireless system(s). For details, refer to the operating instructions of the other wireless system(s).
Stabilizing S-AIR reception

Check the following when S-AIR reception is poor or unstable.
- Confirm the wireless adapters are inserted correctly (page 31).
- Confirm that the S-AIR IDs of the S-AIR main unit and sub unit are the same (page 61).

When S-AIR reception is poor

Check the following.
- Keep cords that are connected to the S-AIR product (AC power cord (mains lead), speaker cords, or other cords) away from the wireless adapter and slot.

- Adjust the location (height, orientation, and place in the room) of S-AIR products until reception is the most stable.

- Place so that the wireless adapters of the S-AIR main unit and sub unit are closer.

- Place so that S-AIR products are separated from other wireless devices.

- Place so that S-AIR products are separated from metal doors or tables.

- Keep as much space as possible around S-AIR products.
  - Avoid placing S-AIR products on top of or directly below other electronic equipment.
  - Avoid placing S-AIR products in a closed rack, metal rack or under a table.

- If you still cannot improve S-AIR reception, change the “RF SETUP” setting (page 65).
Enjoying the S-AIR receiver while the S-AIR main unit is in standby mode

(For the S-AIR receiver only (not supplied))
You can enjoy the S-AIR receiver while the S-AIR main unit is in standby mode by setting “STANDBY” to “STBY ON”.

1. Press AMP MENU.
2. Press †/¶ repeatedly to select “S-AIR”, then press ‡ or †.
3. Press †/¶ repeatedly to select “STANDBY”, then press ‡ or †.
4. Press †/¶ repeatedly to select the setting you want.
   - STBY OFF: You cannot enjoy the S-AIR receiver while the S-AIR main unit is in standby mode.
   - STBY ON: You can enjoy the S-AIR receiver while the S-AIR main unit is in standby mode or turned on.

To exit the menu
Press AMP MENU.

Notes
- When you set “STANDBY” to “STBY ON”, the power consumption increases during the standby mode.
- When the wireless transmitter is removed from the S-AIR main unit, “STANDBY” is set to “STBY OFF” automatically.
- If you have selected “FM TUNER” or “AM TUNER” on the S-AIR main unit before you turn it off and “STANDBY” is set to “STBY ON”, you can only select the same band for the tuner on the S-AIR receiver. However, you can select input other than TUNER on the S-AIR receiver.
- The sound of the S-AIR receiver may be cut off by operation of the S-AIR main unit.
- When the receiver is in standby mode, “S-AIR” indicator will lights up if “STANDBY” is set to “STBY ON”.

S-AIR Operations
Switching between digital and analog audio (INPUT MODE)

When you connect components to both digital and analog input jacks on the receiver, you can fix the audio input mode to either of them, or switch from one to the other, depending on the type of material you intend to watch.

1. **Turn INPUT SELECTOR on the receiver to select the input.**
   You can also use the input buttons on the remote.

2. **Press INPUT MODE repeatedly on the receiver to select the audio input mode.**
   The selected audio input mode appears on the display.

Audio input modes

- **AUTO**
  Gives priority to digital audio signals when there are both digital and analog connections. If there are no digital audio signals, analog audio signals are selected.

- **ANALOG**
  Specifies the analog audio signals input to the AUDIO IN (L/R) jacks.

Notes

- Some audio input modes may not be set up depending on the input.
- When the Analog Direct function is selected, audio input is set to “ANALOG” automatically and you cannot select other modes.
- When HDMI 1–3 or DMPORT input is selected, “-----” appears on the display, and you cannot select other modes. Select an input mode other than the HDMI 1–3 and DMPORT input, then set the audio input mode.

Enjoying the sound/images from other inputs

You can reassign audio and/or video signals to another input when they are not currently being used.

For example when you want to connect your DVD player but cannot find an unused input:

1. **Press AMP MENU.**
2. **Press †/‡ repeatedly to select “AUDIO” or “VIDEO”, then press ⦿ or ⦽.**
3. **Press †/‡ repeatedly to select “A. ASSIGN” or “V. ASSIGN”, then press ⦿ or ⦽.**
4. **Press †/‡ repeatedly to select the input name you want to assign (for example, “DVD”).**
5. **Press ⦿ or ⦽ to enter your selection.**
6. **Press †/‡ repeatedly to select the input jack you want to assign to the input which you selected in step 4.**

To return to the previous display

Press †.

* Initial setting

### Notes

- When you assign the digital audio input, the INPUT MODE setting may change automatically (page 68).
- You cannot reassign more than one HDMI input to the same input.
- You cannot reassign more than one digital audio input to the same input.
- You cannot reassign more than one component video input to the same input.
Enjoying sound/images from the components connected to the DIGITAL MEDIA PORT

The DIGITAL MEDIA PORT (DMPORT) allows you to enjoy sound/images from a portable audio source or computer by connecting a DIGITAL MEDIA PORT adapter.

The DIGITAL MEDIA PORT adapters are available for purchase depending on the area. For details on connecting the DIGITAL MEDIA PORT adapter, see “4a: Connecting the audio components” (page 22).

Notes
• Depending on the DIGITAL MEDIA PORT adapter, video output may not be possible.
• Depending on the type of DIGITAL MEDIA PORT adapter, you can operate the connected component by using the remote. For details on the remote button operation, see page 15.

1 Press DMPORT.
   You can also use the INPUT SELECTOR on the receiver to select “DMPORT”.

2 Start playback of the connected component.
   The sound is played back on the receiver and the image appears on the TV. For details, refer to the operating instructions supplied with the DIGITAL MEDIA PORT adapter.

Tip
When listening to MP3 or other compressed music using a portable audio source, you can enhance the sound. Press SOUND FIELD +/- repeatedly to select “PORTABLE” (page 51).

Using a bi-amplifier connection

1 Press AMP MENU.
2 Press †/‡ repeatedly to select “SPKR”, then press ( or ).
3 Press †/‡ repeatedly to select “PATTERN”, then press ( or ).
4 Press †/‡ select the appropriate speaker pattern so that there are no surround back speakers and front high speakers.
5 Press ( or ).
6 Press †/‡ repeatedly to select “SB ASGN”, then press ( or ).
7 Press †/‡ repeatedly to select “BI-AMP”.
   The same signals output from the SPEAKERS FRONT A terminals can be output from the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/FRONT B terminals.

To exit the menu
Press AMP MENU.
Notes
- Set “SB ASGN” to “BI-AMP” before you perform Auto Calibration.
- If you set “SB ASGN” to “BI-AMP”, the speaker level and distance settings of the surround back speakers and front high speakers become invalid, and those of the front speakers are used.
- If you set “PATTERN” to a setting with surround back speakers or front high speakers, you cannot set “SB ASGN” to “BI-AMP”.

Using the setting menu

By using the amplifier menus, you can make various adjustments to customize the receiver.

1 Press AMP MENU.
2 Press ↪/‹ repeatedly to select the menu you want, then press ↑ or ↓.
3 Press ↪/‹ repeatedly to select the parameter you want to adjust, then press ↑ or ↓.
4 Press ↪/‹ repeatedly to select the setting you want. The setting is entered automatically.

To return to the previous display
Press ◀ or RETURN/EXIT ◄.

To exit the menu
Press AMP MENU.

Note
Some parameters and settings may appear dimmed on the display. This means that they are either unavailable or fixed and unchangeable.
## Overview of the menus

*Depends on the speaker pattern setting, some parameters may not be available.

* represent a speaker channel (FL, FR, CNT, SL, SR, SB, SBL, SBR, LH, RH, SW).

* You can only select this parameter if “PATTERN” is not set to a setting with surround back speakers or front high speakers (page 77).

*METER” for models of area code AU1 and TW2.

* You cannot select this setting if your speaker is set to “LARGE”.

* This parameter is only available when HDMI input signals is detected.

* This parameter is only available if the S-AIR transmitter (not supplied) is inserted to the EZW-T100 slot on the receiver.
LEVEL menu

You can adjust the level of each speaker. These settings are applied to all sound fields.

- **T. TONE**
  Lets you adjust the speaker levels while listening to the test tone from your listening position.
  - OFF
    The test tone is turned off.
  - AUTO
    The test tone is output from each speaker in sequence.
  * ★★★★★ represents a speaker channel.

**Adjusting the speaker level**
You can adjust each speaker’s level using the following parameters.
For front left/right speakers, you can adjust the level from –10.0 dB to +10.0 dB in 0.5 dB steps. For other speakers, you can adjust the level from –20.0 dB to +10.0 dB in 0.5 dB steps.

- **FL LVL**
- **FR LVL**
- **CNT LVL**
- **SL LVL**
- **SR LVL**
- **SB LVL**
- **SBL LVL**
- **SBR LVL**
- **LH LVL**
- **RH LVL**
- **SW LVL**

**Note**
Depends on the speaker pattern setting, some parameters may not be available.

- **D. RANGE**
  Lets you compress the dynamic range of the soundtrack. This may be useful when you want to watch movies at low volumes late at night. Dynamic range compression is possible with Dolby Digital sources only.
  - COMP. MAX
    The dynamic range is compressed dramatically.
  - COMP. STD
    The dynamic range is compressed as intended by the recording engineer.
  - COMP.AUTO
    The dynamic range is compressed automatically.
  - COMP. OFF
    The dynamic range is not compressed.

**Tip**
Dynamic range compressor lets you compress the dynamic range of the soundtrack based on the dynamic range information included in the Dolby Digital signal. “COMP. STD” is the standard setting, but it only enacts light compression. Therefore, we recommend using the “COMP. MAX” setting. This greatly compresses the dynamic range and lets you view movies late at night at low volumes. Unlike analog limiters, the levels are predetermined and provide a very natural compression.
**SPEAKER menu**

You can set the size and distance of the speakers connected to this receiver.

**PATTERN**

Lets you set the number of speakers connected to this receiver. It should be synchronize with the speakers settings.

For example:

```
5 / 2 . 1
2 front + 2 front high + center
```

<table>

*continued*
■ FRT SIZE

- LARGE
  If you connect large speakers that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”. However, if you have selected a speaker pattern without subwoofer, the front speakers are automatically set to “LARGE”.

- SMALL
  If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the front channel bass frequencies from the subwoofer. When the front speakers are set to “SMALL”, the center, surround and front high speakers are also automatically set to “SMALL”.

■ CNT SIZE

- LARGE
  If you connect a large speaker that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”. However, if the front speakers are set to “SMALL”, you cannot set the center speaker to “LARGE”.

- SMALL
  If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the center channel bass frequencies from the front speakers (if set to “LARGE”) or subwoofer.

■ SUR SIZE

The surround back speakers will be set to the same setting.

- LARGE
  If you connect large speakers that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”. However, if the front speakers are set to “SMALL”, you cannot set the surround speakers to “LARGE”.

- SMALL
  If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the surround channel bass frequencies from the subwoofer or other speaker that is set to “LARGE”.

■ FH SIZE

- LARGE
  If you connect large speakers that will effectively reproduce bass frequencies, select “LARGE”. Normally, select “LARGE”. However, if the front speakers are set to “SMALL”, you cannot set front high speakers to “LARGE”.

- SMALL
  If the sound is distorted, or you feel a lack of surround effects when using multi channel surround sound, select “SMALL” to activate the bass redirection circuitry and output the front high channel bass frequencies from the subwoofer or other speaker that is set to “LARGE”.

7868
### Tip

The “LARGE” and “SMALL” settings for each speaker determine whether the internal sound processor will cut the bass signal from that channel. When the bass is cut from a channel, the bass redirection circuitry sends the corresponding bass frequencies to the subwoofer or other “LARGE” speakers.

However, since bass sounds have a certain amount of directionality, it is best not to cut them, if possible. Therefore, even when using small speakers, you can set them to “LARGE” if you want to output the bass frequencies from that speaker. On the other hand, if you are using a large speaker, but prefer not to have bass frequencies output from that speaker, set it to “SMALL”.

If the overall sound level is lower than you prefer, set all speakers to “LARGE”. If there is not enough bass, you can use the equalizer to boost the bass levels. For details, see page 80.

#### SB ASGN
- **SPK B**
  
  If you connect an additional front speaker system to the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/FRONT B terminals, select “SPK B”.
- **BI-AMP**
  
  If you connect front speakers to the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/FRONT B terminals using a bi-amplifier connection, select “BI-AMP”.
- **OFF**
  
  If you connect surround back speakers or front high speakers to the SPEAKERS SURROUND BACK/FRONT HIGH/BI-AMP/FRONT B terminals, select “OFF”.

#### FL DIST.

#### FR DIST.

- Lets you set the distance from your listening position to the front speakers.
- If both front speakers are not placed an equal distance from your listening position, set the distance to the closest speaker.

#### CNT DIST.

- Lets you set the distance from your listening position to the center speaker.

#### SL DIST.

#### SR DIST.

- Lets you set the distance from your listening position to the surround speakers.

#### SB DIST.

#### SBL DIST.

#### SBR DIST.

- Lets you set the distance from your listening position to the subwoofer.

### Notes

- Depends on the speaker pattern setting. Some parameters may not be available.
- This function does not work in the following cases.
  - Signals with a sampling frequency of more than 96 kHz are being received.
  - Analog Direct is selected.

#### DIST.UNIT

- Lets you select the unit of measure for setting distances.
  - **METER**
    - The distance is displayed in meters.
  - **FEET**
    - The distance is displayed in feet.
FRT CRS.
Lets you set the bass crossover frequency of the front speakers that have been set to “SMALL” in the SPEAKER menu.

CNT CRS.
Lets you set the bass crossover frequency of the center speaker that have been set to “SMALL” in the SPEAKER menu.

SUR CRS.
Lets you set the bass crossover frequency of the surround speakers that have been set to “SMALL” in the SPEAKER menu.

FH CRS.
Lets you set the bass crossover frequency of the front high speakers that have been set to “SMALL” in the SPEAKER menu.

S.F. SELCT
Lets you select the sound field you want. For details, see “Enjoying Surround Sound” (page 50).

Note
The receiver lets you apply the last selected sound field to an input whenever it is selected (Sound Field Link). For example, if you select “HALL” for the DVD input, then change to a different input and then return to DVD, “HALL” will automatically be applied again.

EFFECT
Lets you adjust the “presence” of the surround effect for the Cinema Studio EX A/B/C sound fields.

EQ menu
You can adjust the tonal quality (bass/treble level) of the front speakers.

BASS

TREBLE

Note
This function does not work in the following cases.
– Signals with a sampling frequency of more than 48 kHz are being received.
– Analog Direct is selected.

Tip
You can also adjust the front speaker bass and treble level with TONE MODE and TONE +/- on the receiver (page 7).

TUNER menu
You can set the FM station receiving mode and name the preset stations.

FM MODE
• STEREO
  This receiver will decode the signal as stereo signal when the radio station is broadcast in stereo.
• MONO
  This receiver will decode the signal as mono signal regardless of the broadcast signal.

NAME IN
Lets you set the name of preset stations. For details, see “Naming preset stations” (page 48).
**AUDIO menu**

You can make settings for the audio to suit your preference.

**A/V SYNC**  
Lets you delay the output of audio to minimize the time gap between audio output and visual display. You can adjust from 0 (0 ms) to 30 (300 ms) in 1 (10 ms) steps.

**Notes**  
- This parameter is useful when you use a large LCD or plasma monitor or a projector.  
- This function does not work in the following cases.  
  - Multi channel Linear PCM and Dolby TrueHD signals with a sampling frequency of more than 96 kHz are being received.  
  - Analog Direct is selected.

**DUAL**  
Lets you select the language you want to listen to during digital broadcast. This feature only functions for Dolby Digital sources.  
- MAIN/SUB  
  Sound of the main language will be output through the front left speaker and sound of the sub language will be output through the front right speaker simultaneously.  
- MAIN  
  Sound of the main language will be output.  
- SUB  
  Sound of the sub language will be output.

**DEC. PRIO**  
Lets you specify the input mode for the digital signal input to the DIGITAL IN jacks or HDMI IN jacks.  
- DEC. AUTO  
  Automatically switches the input mode between DTS, Dolby Digital, or PCM.  
- DEC. PCM  
  When signals from the DIGITAL IN jack are selected, PCM signals are given priority (to prevent interruption when playback starts). However, when other signals are input, there may be no sound, depending on the format. In this case, set this item to “DEC. AUTO”.  
  When signals from the HDMI IN jack are selected, only PCM signals are output from the connected player. When signals in any other format are received, set this item to “DEC. AUTO”.  

**Notes**  
- Even when “DEC. PRIO” is set to “DEC. PCM”, the sound may be interrupted at the very beginning of the first track depending on the CD being played back.  
- When playback DTS CD, set “DEC. PRIO” to “DEC. AUTO”.

**A. ASSIGN**  
Lets you assign the digital audio input to other input source. For details, see “Enjoying the sound/images from other inputs” (page 68).

**NIGHT M.**  
Lets you to retain a theater-like environment at low volume levels. For details, see “Enjoying the surround effect at low volume levels (NIGHT MODE)” (page 54).  
- NIGHT.OFF  
- NIGHT. ON

**VIDEO menu**

You can assign the video input to other input source.

**V. ASSIGN**  
Lets you assign the video input to other input source. For details, see “Enjoying the sound/images from other inputs” (page 68).
You can make various adjustments for HDMI settings.

CTRL.HDMI

Lets you turn the Control for HDMI function on or off. For details, see “‘BRAVIA’ Sync Features” (page 55).

PASS.THRU

Lets you output the HDMI signals to the TV even when the receiver is in standby mode.
- ON
  When the receiver is in the standby mode, the receiver continuously outputs HDMI signals from the receiver’s HDMI TV OUT jack.
- AUTO
  When the TV is turned on while the receiver is in the standby mode, the receiver outputs HDMI signals from the receiver’s HDMI TV OUT jack. Sony recommends this setting if you use a TV that is compatible with “BRAVIA” Sync. This setting saves power in the standby mode compared with the “ON” setting.
- OFF
  The receiver does not output HDMI signals when in the standby mode. Turn on the receiver to enjoy the connected component’s source on the TV. This setting saves power in the standby mode compared with the “ON” setting.

Notes
- This parameter is not available when “CTRL.HDMI” is set to “CTRL OFF”.
- When “AUTO” is selected, it may take a little more time for the image and sound to be output to the TV than when “ON” is selected.
- When the receiver is in standby mode, “HDMI” indicator will lights up if “PASS.THRU” is set to “AUTO” or “ON”. However, when “PASS.THRU” is set to “AUTO”, this indicator will lights off if no signals are detected.

AUDIO.OUT

Lets you set the HDMI audio output from the playback component connected to the receiver via an HDMI connection.
- TV+AMP
  The sound is output from TV’s speaker and the speakers connected to the receiver.

Notes
- The sound quality of the playback component depends on the TV’s sound quality, such as the number of channels, and the sampling frequency, etc. When the TV has stereo speakers, the sound output from the receiver is also stereo as that of the TV, even if you play back multi channel software.
- When you connect the receiver to an image display component (projector, etc.), sound may not be output from the receiver. In this case, select “AMP”.
- AMP
  The HDMI audio signals from the playback component are only output to the speakers connected to the receiver. Multi channel sound can be played back as it is.

Note
Audio signals are not output from the TV’s speakers when “AUDIO.OUT” is set to “AMP”.

SW LEVEL

Lets you set the level of the subwoofer to 0 dB or +10 dB when multi channel Linear PCM signals are input via an HDMI connection. You can set the level for each HDMI input independently.
- SW AUTO
  Automatically sets the level to 0 dB or +10 dB depending on the frequency.
- SW +10 dB
- SW 0 dB

Note
This parameter is only available when HDMI input signals are detected.
**SW L.P.F.**

Lets you set the low pass filter of the subwoofer when multi channel Linear PCM signals are input via an HDMI connection. Set the “SW L.P.F.” if your connected subwoofer’s crossover frequency do not have low pass filter.

- **L.P.F. ON**
  The low pass filter of the subwoofer’s cut off frequency is set to 120 Hz.

- **L.P.F. OFF**
  The low pass filter of the subwoofer is turned off.

**Note**

This parameter is only available when HDMI input signals are detected.

**ARC**

Lets you enjoy the TV sound from the speakers connected to the receiver via an HDMI cable. For details, see “Enjoying the TV sound via an HDMI cable (Audio Return Channel)” (page 59).

- **ARC ON**
  Audio signal is input to the HDMI TV OUT jack.

- **ARC OFF**
  Audio signal is input to the TV OPTICAL IN jack or TV AUDIO IN jack.

**Note**

This parameter is not available when “CTRL.HDMI” is set to “CTRL OFF”.

**SYSTEM menu**

You can customize the settings of the receiver.

**DIMMER**

Lets you adjust the brightness of the display in 3 levels.

**SLEEP**

Lets you set the Sleep Timer on the receiver to turn off automatically at the specific time. For details, see “Using the Sleep Timer” (page 44).

**AUTO.STBY**

Lets you set the receiver switch to standby mode automatically after 30 minutes when you do not operate the receiver or when there is no signals input to the receiver.

- **STBY ON**
  Switches to standby mode after approximately 30 minutes.

- **STBY OFF**
  Does not switch to standby mode.

**Notes**

- This function does not work in the following cases.
  - TUNER input is selected.
  - S-AIR receiver or surround amplifier is linked.
- If you use the auto standby mode and the Sleep Timer at the same time, the Sleep Timer has priority.

**NAME IN**

Lets you set the name of inputs. For details, see “Naming inputs” (page 43).

**S-AIR menu**

For details on S-AIR, see “S-AIR Operations” (page 60).
Changing the input button assignments

You can change the initial settings of the input buttons to suit the components in your system. For example, if you connect a Blu-ray disc player to the DVD jack on the receiver, you can set the DVD button on this remote to control the Blu-ray disc player.

**Note**
You cannot change the remote assignments for TV, VIDEO 2, DMPORT, TUNER, HDMI 2 and HDMI 3 input buttons.

1. While holding down the input button of which you want to change the assignment, hold down AV I/○.
   Example: While holding down DVD, hold down AV I/○.

2. With the AV I/○ button held, release the input button you selected in step 1.
   Example: With the AV I/○ button held, release DVD.

3. Referring to the following table, press the corresponding button for the category you want, then release AV I/○.
   Example: Press 1, then release AV I/○. Now you can use the DVD button to control the Blu-ray disc player.

### Categories and the corresponding buttons for BD, DVD, SAT/CATV, VIDEO 1, SA-CD/CD and HDMI 1

<table>
<thead>

</tbody>
</table>

²For details on the BD1 or BD3 setting, refer to the operating instructions supplied with the Blu-ray disc player or Blu-ray disc recorder.
²Sony DVD recorders are operated with a DVD1 or DVD3 setting. For details, refer to the operating instructions supplied with the DVD recorders.
²Sony VCRs are operated with a VTR 2 or VTR 3 setting which corresponds to 8 mm and VHS respectively.
²RM-AAU073 only
²²RM-AAU075 only
Clearing all the contents of the remote’s memory

RM-AAU073 only
While holding down MASTER VOL –, press I/○ and INPUT.

RM-AAU075 only
While holding down –, press I/○ and –/○.

The remote is reset to its initial settings.

Additional Information

Glossary

■ Cinema Studio EX
A surround sound mode that can be regarded as the compilation of Digital Cinema Sound technology, delivers the sound of a dubbing theater using three technologies: “Virtual Multi Dimensions,” “Screen Depth Matching,” and “Cinema Studio Reverberation.” “Virtual Multi Dimensions,” the virtual speaker technology, creates a virtual multi-surround environment with actual speakers up to 7.1 channels, and brings the surround sound experience of a theater with the latest facilities into your home. “Screen Depth Matching” reproduces treble attenuation, fullness, and depth of sound usually created in a theater using sound emission from behind the screen. This is then added to the front and center channels. “Cinema Studio Reverberation” reproduces the sound characteristics of state-of-the-art dubbing theaters and recording studios, including Sony Pictures Entertainment’s dubbing studios. There are three modes, A/B/C, available according to the studio type.

■ Component video
A format for transmitting video signal information consisting of three separate signals: luminance Y, chrominance Pb, and chrominance Pr. High quality pictures, such as DVD video or HDTV pictures, are transmitted more faithfully. The three jacks are color-coded green, blue and red.

■ Composite video
A standard format for transmitting video signal information. The luminance signal Y and chrominance signal C are combined and transmitted together.
Deep Color (Deep Colour)
Video signals for which the color depth of signals passing through an HDMI jack have been raised. The number of colors that could be expressed by 1 pixel was 24 bits (16,777,216 colors) with the current HDMI jack. However, the number of colors which can be expressed by 1 pixel will be 36 bits, etc., when the receiver corresponds to Deep Color (Deep Colour). Since the gradation of the depth of a color can be expressed more finely with more bits, continuous color changes can be more smoothly expressed.

Digital Cinema Sound (DCS)
A unique sound reproduction technology for home theater developed by Sony, in cooperation with Sony Pictures Entertainment, for enjoying the exciting and powerful sound of movie theaters at home. With this “Digital Cinema Sound” developed by integrating a DSP (Digital Signal Processor) and measured data, the ideal sound field intended by filmmakers can be experienced at home.

Dolby Digital
Digital audio encoding/decoding technology developed by Dolby Laboratories, Inc. It consists of front (left/right), center, surround (left/right) and subwoofer channels. It is a designated audio standard for DVD video and also known as 5.1 channel surround. Since surround information is recorded and reproduced in stereo, more realistic sound with fuller presence is delivered than with Dolby surround.

Dolby Digital Plus
Dolby Digital Plus provides the flexibility and efficiency to deliver more channels of compelling surround sound for high-definition video media. Its superior coding efficiencies enable up to 7.1ch of high-quality multichannel audio without negatively impacting bit budgets allocated for video performance or additional feature sets.

Dolby Digital Surround EX
Acoustic technology developed by Dolby Laboratories, Inc. Surround back information is matrixed into regular left and right surround channels so that the sound can be reproduced in 6.1 channel. Active scenes, especially, are recreated with a more dynamic and realistic sound field.

Dolby Pro Logic II
This technology converts 2 channel stereo recorded audio into 5.1 channel for playback. There is a MOVIE mode for movies and MUSIC mode for stereo sources such as music. Old movies encoded in the traditional stereo format can be enhanced with 5.1 channel surround sound.

Dolby Pro Logic IIx
Technology for 7.1 channel (or 6.1 channel) playback. Along with audio encoded in Dolby Digital Surround EX, 5.1 channel Dolby Digital encoded audio can be reproduced in 7.1 channel (or 6.1 channel). Furthermore, existing stereo recorded content can also be reproduced in 7.1 channel (or 6.1 channel).

Dolby Pro Logic IIz
Dolby Pro Logic IIz brings a vertical aspect to the sound field through the addition of left and right front high speakers. It decodes nondirectional elements in the audio mix and reproduces them from the high speakers, giving an enhanced sense of depth and airiness to the sound field.

Dolby Surround (Dolby Pro Logic)
Audio processing technology developed by Dolby Laboratories, Inc. Center and mono surround information is matrixed into two stereo channels. When reproduced, audio is decoded and output in 4 channel surround sound. This is the most common audio processing method for DVD video.
Dolby TrueHD
Dolby TrueHD is Dolby’s lossless audio technology developed for high-definition optical discs. Dolby TrueHD audio is bit-for-bit identical to the original studio masters and provides supreme-quality audio up to 8 channel at 96 kHz/24 bit and up to 6 channel at 192 kHz/24 bit. Together with high-definition video, it offers an unprecedented home theater experience.

DTS 96/24
A high sound quality digital signal format. It records audio at a sampling frequency and bit rate of 96 kHz/24 bit which is the highest possible for DVD video. The number of playback channels varies depending on the software.

DTS Digital Surround
Digital audio encoding/decoding technology for theaters developed by DTS, Inc. It compresses audio less than Dolby Digital, delivering a higher quality sound reproduction.

DTS-ES
Format for 6.1 channel playback with surround back information. There are two modes, “Discrete 6.1” which records all channels independently, and “Matrix 6.1” which matrixes surround back channel into surround left and surround right channels. It is ideal for playback of motion picture soundtracks.

DTS-HD
Audio format which extends the conventional DTS Digital Surround format. This format consists of a core and an extension, and the core part has DTS Digital Surround compatibility. There are two kinds of DTS-HD, DTS-HD High Resolution Audio and DTS-HD Master Audio. DTS-HD High Resolution Audio has a maximum transmission rate of 6 Mbps, with lossy compression (Lossy), and DTS-HD High Resolution Audio corresponds to a maximum sampling frequency of 96 kHz, and a maximum of 7.1 channel. DTS-HD Master Audio has a maximum transmission rate of 24.5 Mbps, and uses lossless compression (Lossless), and DTS-HD Master Audio corresponds to a maximum sampling frequency of 192 kHz, and a maximum of 7.1 channel.

DTS Neo:6
This technology converts 2 channel stereo recorded audio for 7 channel playback. There are two modes to select according to the playback source or your preference, CINEMA for movies, and MUSIC for stereo sources such as music.

HDMI (High-Definition Multimedia Interface)
HDMI (High-Definition Multimedia Interface) is an interface that supports both video and audio on a single digital connection, allowing you to enjoy high quality digital picture and sound. The HDMI specification supports HDCP (High-bandwidth Digital Contents Protection), a copy protection technology that incorporates coding technology for digital video signals.

PCM (Pulse Code Modulation)
A method of converting analog audio to digital audio for easy enjoyment of digital sound.
S-AIR (Sony Audio Interactive Radio frequency)
Recent times have seen the rapid spread of DVD media, Digital Broadcasting, and other high quality media. To ensure that the subtle nuances of these high quality media are transmitted with no deterioration, Sony has developed a technology called “S-AIR” for the radio transmission of digital audio signals with no compression, and has incorporated this technology into the EZW-RT10/EZW-T100. This technology transfers digital audio signals with no compression using the 2.4 GHz band range of ISM band (Industrial, Scientific, and Medical band), such as wireless LANs and Bluetooth applications.

Sampling frequency
To convert analog audio to digital, analog data should be quantified. This process is called sampling, and the number of times per second the analog data is quantified is called the sampling frequency. A standard music CD stores data quantified at 44,100 times per second, which is expressed as a sampling frequency of 44.1 kHz. Generally speaking, a higher sampling frequency means better sound quality.

x.v.Color (x.v.Colour)
x.v.Color (x.v.Colour) is a more familiar term for the xvYCC standard proposed by Sony, and is a trademark of Sony. xvYCC is an international standard for color space in video. This standard can express a wider colour range than the currently used broadcast standard.

Precautions

On safety
Should any solid object or liquid fall into the cabinet, unplug the receiver and have it checked by qualified personnel before operating it any further.

On power sources
- Before operating the receiver, check that the operating voltage is identical with your local power supply. The operating voltage is indicated on the nameplate on the back of the receiver.
- The unit is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet, even if the unit itself has been turned off.
- If you are not going to use the receiver for a long time, be sure to disconnect the receiver from the wall outlet. To disconnect the AC power cord (mains lead), grasp the plug itself; never pull the cord.
- The AC power cord (mains lead) must be changed only at a qualified service shop.
- (Models of area code U2, CA2 only) One blade of the plug is wider than the other for the purpose of safety and will fit into the wall outlet only one way. If you are unable to insert the plug fully into the outlet, contact your dealer.

On heat buildup
Although the receiver heats up during operation, this is not a malfunction. If you continuously use this receiver at a large volume, the cabinet temperature of the top, side and bottom rises considerably. To avoid burning yourself, do not touch the cabinet.
On placement

- Place the receiver in a location with adequate ventilation to prevent heat buildup and prolong the life of the receiver.
- Do not place the receiver near heat sources, or in a place subject to direct sunlight, excessive dust, or mechanical shock.
- Do not place anything on top of the cabinet that might block the ventilation holes and cause malfunctions.
- Do not place the receiver near equipment such as a TV, VCR, or tape deck. (If the receiver is being used in combination with a TV, VCR, or tape deck, and is placed too close to that equipment, noise may result, and picture quality may suffer. This is especially likely when using an indoor antenna (aerial). Therefore, we recommend using an outdoor antenna (aerial).)
- Use caution when placing the receiver on surfaces that have been specially treated (with wax, oil, polish, etc.) as staining or discoloration of the surface may result.

On operation

Before connecting other components, be sure to turn off and unplug the receiver.

On cleaning

Clean the cabinet, panel, and controls with a soft cloth slightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder, or solvent, such as alcohol or benzine.

On S-AIR function

- As the S-AIR product(s) transmits sound by radio waves, sound may skip when radio waves are obstructed. This is a characteristic of radio waves and is not malfunction.
- As the S-AIR product(s) transmits sound by radio waves, equipment that generates electromagnetic energy, such as a microwave oven, may interfere with sound transmission.
- As the S-AIR product(s) uses the radio waves that share the same frequency as other wireless systems, such as wireless LAN or Bluetooth devices, interference or poor transmission may result. In this case, take the following steps to enhance the transmission of signal:
  - Avoid placing the S-AIR product(s) near other wireless systems.
  - Avoid using the S-Air product(s) and the other wireless systems at the same time.
  - The transmission may be improved by changing the transmission channel (frequency) of the other wireless system(s). For details, refer to the operating instructions of the other wireless system(s).
- The transmission distance differs depending on the usage environment. Find a location where transmission between the S-AIR main unit and sub unit is most effective, and install the S-AIR main unit and sub unit there.
- Place the S-AIR product(s) on the stable surface off the floor.
- Poor transmission may occur and the transmission distance may be too short if the following conditions exist:
  - There is a wall/floor made of reinforced concrete or stone between the S-AIR product(s).
  - There is an iron divider/door or furniture/electric product made of fireproof glass, metal, etc., between the S-AIR product(s).

If you have any questions or problems concerning your receiver, please consult your nearest Sony dealer.
Troubleshooting

If you experience any of the following difficulties while using the receiver, use this troubleshooting guide to help you remedy the problem. Should any problem persist, consult your nearest Sony dealer.

Audio

There is no sound, no matter which component is selected, or only a very low-level sound is heard.

- Check that the speakers and components are connected correctly and securely.
- Check that all speaker cords are connected correctly.
- Check that both the receiver and all components are turned on.
- Check that MASTER VOLUME is not set to “VOL MIN”.
- Check that the SPEAKERS is not set to “SPK OFF” (page 33).
- Check that headphones are not connected to the receiver or S-AIR surround amplifier.
- Press MUTING (RM-AAU073) or (RM-AAU075) on the remote to cancel the muting function.
- Check that you have selected the correct component with the input buttons (page 42).
- The protective device on the receiver has been activated. Turn off the receiver, eliminate the short-circuit problem, and turn on the power again.

There is no sound from a specific component.

- Check that the component is connected correctly to the audio input jacks for that component.
- Check that the cord(s) used for the connection is (are) fully inserted into the jacks on both the receiver and the component.

There is no sound from one of the front speakers.

- Connect a pair of headphones to the PHONES jack to verify that sound is output from the headphones. If only one channel is output from the headphones, the component may not be connected to the receiver correctly. Check that all the cords are fully inserted into the jacks on both the receiver and the component. If both channels are output from the headphones, the front speaker may not be connected to the receiver correctly. Check the connection of the front speaker which is not outputting any sound.
- Make sure you have connected to both the L and R jacks of an analog component, and not only to either the L or R jack. Use an audio cord (not supplied).

There is no sound from analog 2 channel sources.

- Check that the INPUT MODE is not set to “AUTO” (page 68) and the DIGITAL connection is not made for the selected input.
- Check that the INPUT MODE is not set to “AUTO” (page 68) and the “A. ASSIGN” function is not used to reassign the audio input of another source to the selected input (page 68).
There is no sound from digital sources (from COAXIAL or OPTICAL input jack).

- Check that the INPUT MODE is not set to “ANALOG” (page 68).
- Check that the Analog Direct function is not selected.
- Check that the “A. ASSIGN” function is not used to reassign the audio input of another source to the selected input (page 68).
- Set “ARC” to “ARC OFF” when no sound is output from TV OPTICAL IN jack during TV input (page 83).

The left and right sounds are unbalanced or reversed.

- Check that the speakers and components are connected correctly and securely.
- Adjust the level parameters using the LEVEL menu.

There is severe hum or noise.

- Check that the speakers and components are connected securely.
- Check that the connecting cords are away from a transformer or motor, and at least 10 feet (3 meters) away from a TV set or fluorescent light.
- Move your audio components away from the TV.
- The plugs and jacks are dirty. Wipe them with a cloth slightly moistened with alcohol.

There is no sound, or only a very low-level sound is heard from the center/surround/surround back/front high speakers.

- Select a CINEMA STUDIO EX mode (page 50).
- Check that the speaker settings are appropriate using the AUTO CAL menu or “PATTERN” in the SPEAKER menu. Then check that sound is output from each speaker correctly, using “T. TONE” in the LEVEL menu.
- Adjust the speaker level (page 40).

There is no sound from the subwoofer.

- Check that the subwoofer is connected correctly and securely.
- Make sure you have turned on your subwoofer.
- Depending on the selected sound field, no sound output from the subwoofer.
- When all speakers are set to “LARGE” and “NEO6 CIN” or “NEO6 MUS” is selected, there is no sound from the subwoofer.
- Check “PATTERN” setting (page 77).

The surround effect cannot be obtained.

- Make sure you have selected the sound field for movie or music mode (page 50 or 51).
- Sound fields do not function for signals with a sampling frequency of more than 48 kHz.

Dolby Digital or DTS multi channel sound is not reproduced.

- Check that the DVD, etc. you are playing is recorded in Dolby Digital or DTS format.
- When connecting the DVD player, etc., to the digital input jacks of this receiver, check the audio setting (the settings for the audio output) of the connected component. For example, when connecting the “PlayStation 3”, set the BD/DVD audio output format to “Bitstream” on the “PlayStation 3”.
- Set “AUDIO.OUT” to “AMP” in the HDMI menu.

Recording cannot be carried out.

- Check that the components are connected correctly.
- Select the source component using the input buttons (page 42).
There is no sound from the component connected to the DIGITAL MEDIA PORT adapter.

- Adjust the volume of this receiver.
- The DIGITAL MEDIA PORT adapter and/or component is not connected correctly. Turn off the receiver, then reconnect the DIGITAL MEDIA PORT adapter and/or component.
- Check the DIGITAL MEDIA PORT adapter and/or component device to make sure it supports this receiver.

There is no picture or an unclear picture appears on the TV screen or monitor.

- Select the appropriate input using the input buttons.
- Set your TV to the appropriate input mode.
- Move your audio components away from the TV.
- Depending on the DIGITAL MEDIA PORT adapter, video output may not be possible.

Recording cannot be carried out.

- Check that the components are connected correctly.
- Select the source component using the input buttons (page 42).

Tuner

The FM reception is poor.

- Use a 75-ohm coaxial cable (not supplied) to connect the receiver to an outdoor FM antenna (aerial) as shown below. If you connect the receiver to an outdoor antenna (aerial), ground it against lightning. To prevent a gas explosion, do not connect the ground (earth) wire to a gas pipe.

Radio stations cannot be tuned in.

- Check that the antennas (aerials) are connected securely. Adjust the antennas (aerials) and connect an external antenna (aerial), if necessary.
- The signal strength of the stations is too weak (when tuning in with automatic tuning). Use direct tuning.
- Make sure you set the tuning interval correctly (when tuning in AM stations with direct tuning).
- No stations have been preset or the preset stations have been cleared (when tuning by scanning preset stations). Preset the stations (page 47).
- Press DISPLAY repeatedly so that the frequency appears on the display.

RDS does not work.*

- Make sure that you are tuned to an FM RDS station.
- Select a stronger FM station.
The RDS information that you want does not appear.*

- Contact the radio station and find out whether they actually provide the service in question. If so, the service may be temporarily out of order.

* Models of area code AU1, TW2 only.

**HDMI**

The source sound input to the HDMI jack is not output from the receiver or the TV speaker.

- Check the HDMI connection (page 24).
- You cannot listen to the Super Audio CD by connecting HDMI.
- Depending on the playback component, you may need to set up the component. Refer to the operating instructions supplied with each component.
- Be sure to use a High Speed HDMI cable when you view images or listen to sound during Deep Color (Deep Colour) transmission.

The source image input to the HDMI jack is not output from the TV.

- Check the HDMI connection (page 24).
- Depending on the playback component, you may need to set up the component. Refer to the operating instructions supplied with each component.
- Be sure to use a High Speed HDMI cable when you view images or listen to sound during Deep Color (Deep Colour) transmission.

The Control for HDMI function does not work.

- Check the HDMI connection (page 24).
- Make sure “CTRL.HDMI” is set to “CTRL ON” in the HDMI menu.
- Make sure the connected component is compatible with the Control for HDMI function.
- Check the Control for HDMI settings on the connected component. Refer to the operating instructions of the connected component.
- Repeat the procedures of “Preparing for the “BRAVIA” Sync” if you change the HDMI connection, connect/disconnect the AC power cord (mains lead), or when there is a power failure (page 55).

No sound is output from the receiver and TV speaker while using the System Audio Control function.

- Make sure the TV is compatible with the System Audio Control function.
- If the TV does not have System Audio Control function, set the “AUDIO.OUT” settings in HDMI menu to
  - “TV+AMP” if you want to listen to the sound from the TV speaker and receiver.
  - “AMP” if you want to listen to the sound from the receiver.
- When you connect the receiver to a video component (projector, etc.), sound may not be output from the receiver. In this case, select “AMP”.
- If you cannot listen to the sound of a component connected to the receiver
  - Change the input of the receiver to HDMI when you want to watch a program on a component connected via HDMI connection to the receiver.
  - Change the TV channel when you want to watch a TV broadcast.
  - Select the component or input you want to watch when you watch a program on the component connected to the TV. Refer to the operating instructions of the TV on this operation.

continued
When the receiver is in standby mode, there is no image or sound on the TV.

- When the receiver is in standby mode, image and sound are output from the HDMI component selected the last time you turned off the receiver. If you are enjoying other component, play the component and perform the One-Touch Play operation, or turn on the receiver to select the HDMI component you want to enjoy.
- Make sure “PASS.THRU” is set to “ON” in the HDMI menu if you connect components not compatible with the “BRAVIA” Sync to the receiver (page 82).

No sound is heard from the S-AIR product.

- If you use another S-AIR main unit, place it more than 26 feet (8 m) away from this S-AIR main unit.
- Confirm the S-AIR IDs of the S-AIR main unit and S-AIR sub unit (page 61).
- Confirm the pairing setting (page 62).
- Place the S-AIR main unit and S-AIR sub unit closer to each other.
- Avoid use of equipment that generates electromagnetic energy, such as a microwave oven.
- Place the S-AIR main unit and S-AIR sub unit separately from other wireless devices.
- Avoid using any other wireless devices.
- Change the “RF SETUP” setting (page 65).
- Change the S-AIR ID settings of the S-AIR main unit and S-AIR sub unit.
- Turn off the system and S-AIR sub unit, then turn on them.
- Check that headphones are not connected to the S-AIR sub unit.

There is noise or the sound skips.

- If you use another S-AIR main unit, place it more than 26 feet (8 m) away from this S-AIR main unit.
- Place the S-AIR main unit and S-AIR sub unit closer to each other.
- Avoid use of equipment that generates electromagnetic energy, such as a microwave oven.
- Place the S-AIR main unit and S-AIR sub unit separately from other wireless devices.
- Avoid using any other wireless devices.
- Change the “RF SETUP” setting (page 65).
- Change the S-AIR ID settings of the S-AIR main unit and S-AIR sub unit.

S-AIR function

S-AIR connection is not established (sound transmission is not established), e.g., the indicator of the S-AIR sub unit turns off, flashes, or turns red.

- If you use another S-AIR main unit, place it more than 26 feet (8 m) away from this S-AIR main unit.
- Confirm the S-AIR IDs of the S-AIR main unit and S-AIR sub unit (page 61).
- Another S-AIR sub unit is paired to the S-AIR main unit. Pair the desired S-AIR sub unit with the S-AIR main unit (page 62).
- Place the S-AIR main unit and S-AIR sub unit separately from other wireless devices.
- Avoid using any other wireless devices.
- The S-AIR sub unit is turned off. Make sure the AC power cord (mains lead) is connected and turn on the S-AIR sub unit.
- Change the S-AIR ID settings of the S-AIR main unit and S-AIR sub unit.

No sound is heard from the S-AIR receiver.

- Check that the components are connected to this receiver.
- Place the S-AIR main unit and S-AIR sub unit closer to each other.
- Avoid use of equipment that generates electromagnetic energy, such as a microwave oven.
- Place the S-AIR main unit and S-AIR sub unit separately from other wireless devices.
- Avoid using any other wireless devices.
- Change the “RF SETUP” setting (page 65).
- Change the S-AIR ID settings of the S-AIR main unit and S-AIR sub unit.
“HP NO LK” and “VOL MIN” appear alternately in the display and the volume of the receiver becomes minimum.

- Volume becomes minimum when you turn off the surround amplifier with headphones connected or if the radio reception is poor. In these cases, check the radio reception and adjust the volume level to restore sound from the headphone.

Remote commander

The remote does not function.

- Point the remote at the remote sensor on the receiver.
- Remove any obstacles in the path between the remote and the receiver.
- Replace all the batteries in the remote with new ones, if they are weak.
- Make sure you select the correct input on the remote.

Others

The receiver is turned off automatically.

- The “AUTO.STBY” function is working (page 83).

Error messages

If there is a malfunction, the display shows a message. You can check the condition of the system by the message. See the following table to solve the problem. If any problem persists, consult your nearest Sony dealer.

If an error message appears while you perform Auto Calibration, see “When error codes appear” (page 37) to solve the problem.

PROTECTOR

Irregular current is output to the speakers, or the upper panel of the receiver is covered with something. The receiver will automatically turn off after a few seconds. Check the speaker connection and turn on the power again.

If you are unable to remedy the problem using the troubleshooting guide

Clearing the receiver’s memory may remedy the problem (page 33). However, note that all memorized settings will be reset to their initial settings and you will have to readjust all settings on the receiver.

If the problem persist

Consult your nearest Sony dealer. Note that if service personnel changes some parts during repair, these parts may be retained.

In the event of a problem with S-AIR function, have a Sony dealer check the entire system together (S-AIR main unit and S-AIR sub unit).

Additional Information

95
Specifications

**AUDIO POWER SPECIFICATIONS**

POWER OUTPUT AND TOTAL HARMONIC DISTORTION:  
(Models of area code U2 only)
With 8 ohm loads, both channels driven, from 20 – 20,000 Hz; rated 95 watts per channel minimum RMS power, with no more than 0.09% total harmonic distortion from 250 milliwatts to rated output.

**Amplifier section**  
Models of area code U2

Minimum RMS Output Power  
(8 ohms, 20 Hz – 20 kHz, THD 0.09%)  
95 W + 95 W

Stereo Mode Output Power  
(8 ohms, 1 kHz, THD 1%)  
105 W + 105 W

Surround Mode Output Power  
(8 ohms, 1 kHz, THD 10%)  
140 W per channel

Models of area code CA2, AU1, TW2

Minimum RMS Output Power  
(8 ohms, 20 Hz – 20 kHz, THD 0.09%)  
85 W + 85 W

Stereo Mode Output Power  
(8 ohms, 1 kHz, THD 1%)  
100 W + 100 W

Surround Mode Output Power  
(8 ohms, 1 kHz, THD 10%)  
140 W per channel

1) Measured under the following conditions:

<table>
<thead>
